³ Excluding effects from ModCo derivatives and inflation swaps

⁴ Operating result (EBIT)/net premium earned

Ulrich Wallin,
Chairman of the
Executive Board

Dear shareholders, ladies and gentlemen,

I am delighted to report that once again we were able to start the new financial year on an exceptionally successful note in 2015. This is especially gratifying against the backdrop of the sustained difficult business environment in the international (re)insurance industry and the continued challenge posed by low interest rates. We were able to boost Group net income by another 20 percent to EUR 280 million for the first quarter and thus put in place a good foundation for achieving our 2015 profit target of around EUR 875 million.

The key factors that led to this good performance were an outstanding result in life and health reinsurance and another satisfactory underwriting profit in property and casualty reinsurance. Investment income also fully lived up to our expectations. Not only that, our gross premium volume – adjusted for exchange rate effects – comfortably beat our expectations with growth of 10 percent for the first quarter.

I would now like to give you some details about the development of our business in the year to date:

Following three consecutive years of low major loss expenditures and very good results, property and casualty reinsurance markets are again seeing fierce competition in the current year. Fewer risks are being reinsured by our ceding companies on account of their healthy capital resources. The inflow of capital from the ILS market is adding to this capacity surplus. As anticipated, these factors were also crucial in shaping the treaty renewals as of 1 January 2015, when around 65 percent of our property and casualty reinsurance portfolio was renegotiated. Despite the challenges described above, we were nevertheless satisfied with the outcome of the renewals: while the price decline in many markets was significant compared to the previous year, we achieved adequate results thanks to our good rating and long-standing customer relationships. Although we continue to adhere systematically to our selective underwriting policy, we were able to preserve the stability of our portfolio. German and US business proved particularly durable in this renewal season. Growth opportunities presented themselves in Asia-Pacific markets and in Latin America.

Gross premium in property and casualty reinsurance – adjusted for exchange rate effects – grew by a substantial 13 percent to around EUR 2.4 billion as of 31 March 2015. Particularly significant here were increases in emerging markets, the United States and in the area of agricultural risks. A special effect also played a part in connection with our facultative reinsurance business, a partial portfolio for which we have refined our methods used to calculate and defer estimated amounts from reinsurance treaties not yet brought to account. This effect led to non-recurring additional premium of EUR 93 million. Even if this special effect is eliminated, we were able to grow our gross premium by roughly 8 percent on a currency-adjusted basis. This figure beats our expectations and shows that we have made a highly successful start to the 2015 financial year. A healthy operating profit (EBIT) of EUR 255 million was generated in property and casualty reinsurance. The fact that it falls short of the figure for the comparable period can be attributed primarily to lower investment income on account of negative fair value changes in our financial assets measured at fair value through profit or loss. This was due principally to the performance of our inflation swaps. We benefited from the continued good quality of our portfolio and from reduced retrocession costs. The combined ratio of 95.7 percent was once again better than our target figure. Major loss expenditure in the first quarter remained below our expectations. The largest single loss for our account was the storm “Niklas”, which caused considerable damage in Europe. One event, however, affected us all especially deeply: the crash of the German passenger jet in the French Alps on 24 March 2015, which cost 150 people their lives. Given that we maintained our prudent reserving policy with respect to the pro rata portion of the major loss budget, its underutilisation largely had no implications for income.

We are thoroughly satisfied with developments in our Life & Health reinsurance business group. As expected, we booked currency-adjusted premium growth of almost 7 percent to EUR 1.6 billion, with Asian markets playing an especially prominent part here. While the international market climate remains competitive due to the protracted low level of interest rates, we nevertheless see further opportunities for sustainable growth going forward thanks to our worldwide presence. These include, inter alia, reinsurance solutions in the area of longevity risks. Profitability was significantly more favourable than in the comparable period of the previous year: the substantially improved result shows that the steps taken to boost profitability in our Australian disability portfolio and to some extent also in US mortality business are making themselves felt. Not only that, we booked a special effect in the ordinary investment income. The operating profit (EBIT) showed a very pleasing increase from EUR 66 million to EUR 173 million.

We are also satisfied with the development of our investments: building on the appreciable increase in 2014, the portfolio of assets under own management recorded further vigorous growth to reach roughly EUR 40 billion – a gain of 9.5 percent. This was driven above all by the increase in the valuation reserves as a consequence of the decline in interest rates as well as by the weakness of the euro against our main investment currencies. Although interest rates continued to move lower, ordinary income from fixed-income investments excluding interest on deposits increased on the back of larger asset holdings. As a result, and also due in particular to the aforementioned special effect in life and health reinsurance, investment income from assets under own management rose appreciably despite the drop in net unrealised gains and lower realised gains. The generated return on investment (excluding ModCo derivatives and inflation swaps) of 3.5 percent leaves us very well placed to achieve our target.

The sharply higher valuation reserves and positive movements in exchange rates served once again to substantially increase your company's shareholders' equity. Compared to the position as at 31 December 2014, shareholders' equity grew by almost 13 percent and now stands at EUR 8.5 billion. This corresponds to a book value per share of EUR 70.68. Despite the increased capital we achieved an attractive annualised return on equity of 13.9 percent.

In view of the good start to 2015, I would like to confirm to you our guidance for Group net income in the order of EUR 875 million for the full financial year. As always, this forecast is subject to the proviso that major loss expenditure does not significantly exceed the expected level of EUR 690 million and that there are no substantial downturns on capital markets.

I would like to thank you – also on behalf of my colleagues on the Executive Board – most sincerely for your trust in Hannover Re. Going forward, as in the past, our paramount concern will be to lead your company responsibly and securely into a continued profitable future.

Yours sincerely,

Ulrich Wallin
Chairman of the Executive Board

Report on economic position

Business development

- Good start to the 2015 financial year
- Premium growth beats expectations
- Very good Group net income

We are highly satisfied with the development of business in the first quarter of 2015. Good results were generated in both property & casualty and life & health reinsurance. What is more, investment income performed in line with our expectations despite the challenging environment.

Gross written premium in total business increased by a very substantial 21.4% as at 31 March 2015 to EUR 4.4 billion (EUR 3.6 billion). At constant exchange rates, growth would have come in at 10.3%. This figure for the first quarter puts us comfortably within our target corridor of continued moderate growth in gross premium for the full year. The level of retained premium rose slightly compared to the corresponding period of the previous year to stand at 88.6% (88.4%). Net premium earned increased by 17.8% to EUR 3.4 billion (EUR 2.9 billion); growth would have amounted to 6.9% at constant exchange rates.

Building on the already appreciable growth in 2014, the portfolio of assets under own management rose further to EUR 39.7 billion (31 December 2014: EUR 36.2 billion). This was due primarily to exchange rate effects, although higher valuation reserves as a consequence of a further drop in interest rates also played a part here. Another very positive operating cash flow, which reached EUR 689.1 million in the first quarter, was an additional factor. Despite the broadly sustained low interest rate environment, ordinary investment income excluding interest on deposits was sharply up on the comparable period at EUR 312.2 million (EUR 241.4 million). This figure includes a special effect from the Life & Health reinsurance business group amounting to EUR 38.7 million. Interest on deposits increased to EUR 99.0 million (EUR 88.6 million).

Net realised gains on investments were somewhat lower than in the corresponding quarter of the previous year at EUR 45.0 million (EUR 54.1 million). The higher realised gains recorded in the previous year were driven in particular by activity associated with repayment of a subordinated bond. Fair value changes in our financial assets measured at fair value through profit or loss were negative on balance at EUR 10.6 million, as against a positive amount of EUR 7.4 million in the comparable period. The impairments taken in the period under review were once again only very minimal.

Income from investments under own management climbed sharply as at 31 March 2015 to EUR 316.6 million (EUR 272.5 million). The most significant factor here was the special effect in life and health reinsurance, although higher ordinary income from fixed-income investments and real estate also played a part. The lower net realised gains and a reduced result from our financial assets measured at fair value through profit or loss were thus comfortably offset. The annualised return generated on investments under own management (excluding ModCo derivatives and inflation swaps) stood at 3.5% (3.4%).

The operating profit (EBIT) for the Hannover Re Group rose to EUR 429.0 million (EUR 349.6 million) as at 31 March 2015. This pleasing increase of 22.7% can be attributed in particular to a considerably improved result in life and health reinsurance. Group net income was highly satisfactory at EUR 279.7 million (EUR 233.0 million). Earnings per share amounted to EUR 2.32 (EUR 1.93).

Shareholders' equity once again surged vigorously to reach EUR 8.5 billion as at 31 March 2015 (31 December 2014: EUR 7.6 billion). The book value per share amounted to EUR 70.68 (31 December 2014: EUR 62.61). The annualised return on equity remained on an attractive level at 13.9% (31 December 2014: 14.7%).

Results of operations, financial position and net assets

Property and casualty reinsurance

- Sustained competition in property and casualty reinsurance
- Treaty renewals as at 1 January 2015 deliver solid outcome
- Major loss expenditure in first quarter lower than anticipated
- Group net income again on a gratifying level

The prevailing intense competition in property and casualty reinsurance shows no signs of easing. Given the absence of market-changing major losses, our ceding companies are well capitalised and consequently passing on fewer risks overall to the reinsurance market. Furthermore, the inflow of capital from the ILS market led to appreciable price erosion, especially in US natural catastrophe business.

These factors were also crucial in shaping the treaty renewals as at 1 January 2015. It was on this main renewal date for reinsurance treaties that around 65% of our portfolio was renegotiated. Bearing in mind the challenging environment, we are broadly satisfied with the outcome for our company, despite the fact that the rate quality of the renewed portfolio was lower than in the previous year.

Although the price decline in many markets was significant compared to the previous year, we achieved a thoroughly positive outcome thanks to our good rating and long-standing customer relationships. We were especially satisfied with the price trend for our German and US business. The rate level in the United States was commensurate with the risks, hence enabling us to enlarge our premium volume through systematic new business acquisitions. In Germany we were able to obtain further price increases for non-proportional motor own damage covers on account of losses from windstorm and hail events in prior years. The total portfolio in our domestic German market closed with a modest premium gain due to new client accounts.

The development of rates in the aviation line was less favourable. The significant major losses incurred in 2014 failed to produce the price increases that had been expected here. Given the unchanged generous availability of insurance capacity, rates showed only limited movement and we therefore scaled back our premium volume.

Despite adhering to our systematic, profit-oriented underwriting policy, we booked a higher premium volume for our total renewed portfolio of property and casualty reinsurance. Particularly notable increases were recorded in emerging markets, the United States and in the area of agricultural risks.

Driven in part also by the strong US dollar, the gross premium for our Property & Casualty reinsurance business group surged by a vigorous 24.2% to EUR 2.6 billion (EUR 2.1 billion). This additionally includes a non-recurring special effect of EUR 93.4 million in facultative reinsurance business resulting from improved estimation methods for more timely booking of premiums. At constant exchange rates an increase of altogether 13.0% would have been recorded. The level of retained premium contracted year-on-year to 88.9% (91.2%). Net premium earned climbed by 15.4% to EUR 1.9 billion (EUR 1.6 billion); adjusted for exchange rate effects, growth would have amounted to 4.9%.

As had already been the case in the previous year, expenditure on major losses came in under the envisaged budget, but at EUR 62.0 million it was higher than the figure for the comparable period of the previous year (EUR 30.6 million). Along with storm "Niklas" and a winter storm in the United States, the crash of a German passenger jet in the French Alps marked another tragic event for the civil aviation industry. The underwriting result for total property and casualty reinsurance still closed on a high level at EUR 76.6 million (EUR 87.6 million). The combined ratio of 95.7% was in line with our goal of achieving a combined ratio below 96% for the full year.

The investment income for property and casualty reinsurance contracted by 4.8% to EUR 195.1 million (EUR 204.8 million); the higher net realised gains recorded in the corresponding quarter of the previous year were the key factor here.

The operating profit (EBIT) in property and casualty reinsurance decreased to EUR 255.2 million (EUR 280.5 million) as at 31 March 2015. The EBIT margin of 13.6% (17.2%) exceeded the minimum target of 10%. Group net income fell short of the very good result booked in the comparable period of the previous year, retreating from EUR 197.9 million to EUR 171.4 million. Earnings per share stood at EUR 1.42 (EUR 1.64).

Key figures for property and casualty reinsurance

² Including funds withheld

Life and health reinsurance

- Significantly improved result
- Expansion of our global presence further reinforced with establishment of a branch in Canada
- Implementation of Chinese supervisory regime C-ROSS brings challenges and opportunities for the industry

The first quarter of 2015 passed off exceptionally favourably for our life and health reinsurance portfolio. The economic climate has changed only marginally compared to 2014. Most notably, low interest rates continue to influence European insurance and reinsurance markets. In Germany the low level of interest rates is stimulating debate around a number of issues, including the transfer of life insurance business to consolidated run-off platforms. In addition, primary insurers are taking an interest in attractive alternatives to traditional endowment insurance products. As a globally operating reinsurer we take on the challenge of offering appropriate solutions. The adoption in China of the new regulatory regime C-ROSS (China Risk Oriented Solvency System), which has considerable similarities to the European Solvency II Directive, opens up opportunities for products designed to provide solvency relief and will therefore generate rising demand among primary insurers. As an experienced and established international partner, we shall support our clients in this regard.

As we had anticipated, our US financial solutions portfolio as well as our health and special risk business fared well in the quarter just ended and contributed to a further improvement in profitability. In addition, we extended our presence on the North American continent by opening a branch in Toronto, Canada. We are very confident that the Canadian life insurance market offers fresh and promising potential.

Furthermore, our business activities in the mature insurance markets of France, the United Kingdom, Scandinavia and Japan as well as in emerging growth markets of South America, Asia and Africa fully lived up to our expectations.

Gross written premium consequently increased by 17.6% as at 31 March 2015 to reach EUR 1.8 billion (EUR 1.5 billion). Growth would have totalled 6.5% at constant exchange rates. Net premium earned climbed by a very pleasing 21.0% to EUR 1.5 billion (EUR 1.3 billion); adjusted for exchange rates, growth of 9.4% would have been generated. The retention rose to 88.1% (84.5%).

Investment income in life and health reinsurance totalled EUR 219.4 million (EUR 152.0 million) in the first quarter of 2015, a substantial increase of 44.4% driven by a special effect: a fee of EUR 38.7 million became payable owing to a customer-initiated withdrawal from a single US transaction in the area of financial solutions. Given that the arrangement constitutes a derivative financial instrument in accordance with IAS 39, the fee is also recognised within investment income and hence favourably affected the result. The performance of investments held for our account by US cedants, which is recognised in income, fell well short of the corresponding period of the previous year at EUR 19.1 thousand (EUR 5.9 million). Assuming that the experience develops as planned, these valuation gains and losses will fully offset in the period until maturity of the securities, which means that this position should close out with no effect on income over the entire duration.

Compared to the corresponding period of the previous year, the operating profit (EBIT) in life and health reinsurance as at 31 March 2015 was more than doubled to EUR 173.3 million (EUR 65.6 million), as a consequence of which the EBIT margins for all business categories surpassed their respective targets. For financial solutions business it stood at 32.4%

owing to the positive special effect that was booked, while for longevity it amounted to 4.4% and for mortality and morbidity the figure was 8.1%. Group net income in life and health reinsurance came in at a very pleasing EUR 127.5 million (EUR 43.4 million). Earnings per share amounted to EUR 1.06 (EUR 0.36).

Key figures for life and health reinsurance

in EUR million	2015		2014
	1.1.–31.3.	+/- previous year	1.1.–31.3.
Gross written premium	1,783.3	+17.6%	1,516.7

Investment income	219.4	+44.4%	152.0
Operating result (EBIT)	173.3	+164.4%	65.6
Net income after tax	127.5	+193.9%	43.4
Earnings per share in EUR	1.06	+193.9%	0.36
Retention	88.1%		84.5%
EBIT margin ¹	11.2%		5.1%

¹ Operating result (EBIT)/net premium earned

Investments

- High-quality diversified investment portfolio to be maintained
- Ordinary investment income higher thanks to larger asset portfolios
- Return on investment very much on track at 3.5%

Hannover Re's investment policy continues to be guided by the following core principles:

- generation of stable and risk-commensurate returns while at the same time maintaining the high quality standard of the portfolio;
- ensuring the liquidity and solvency of Hannover Re at all times;
- high diversification of risks;
- limitation of currency exposures and maturity risks through matching currencies and maturities.

The investment climate was once again challenging in the period under review and notable for a low level of interest rates overall as well as relatively low risk premiums on corporate bonds. Further declines in yields were observed for German, UK and US government bonds across all durations, as a consequence of which German short- and medium-term debt is now being sold at a negative return in net terms.

Credit spreads on European and US corporate bonds remained largely stable in most rating classes; the quest by investors for profitable investment opportunities nevertheless led to a further decline in risk premiums in lower rating classes. In total, the unrealised gains on our fixed-income securities increased

to EUR 2,133.2 million (EUR 1,743.6 million). Following the already significant growth recorded in 2014, our portfolio of assets under own management rose again to EUR 39.7 billion (31 December 2014: EUR 36.2 billion). This can be attributed primarily to effects associated with the appreciation of currencies – and especially the US dollar – against the euro, although higher valuation reserves due to the further decline in interest rates were also a factor here. We left the allocation of our assets to the individual classes of securities broadly unchanged in the first quarter, as a consequence of which only minimal adjustments were made in the context of regular portfolio maintenance. The modified duration of our fixed-income portfolio remained unchanged from the previous year at 4.6 (4.6).

Despite the continued low level of interest rates, ordinary investment income excluding interest on deposits was significantly higher than in the corresponding period of the previous year at EUR 312.2 million (EUR 241.4 million). This was attributable principally to the aforementioned special effect in life and health reinsurance and also in part to substantially higher income from fixed-income investments and real estate. Interest on deposits also climbed to EUR 99.0 million (EUR 88.6 million).

Impairments of altogether just EUR 8.2 million (EUR 5.5 million) were taken. This includes impairments of EUR 2.4 million (EUR 0.0 million) on fixed-income securities and EUR 0.4 million (EUR 1.2 million) on alternative investments. Scheduled depreciation on directly held real estate rose to EUR 5.1 million (EUR 4.4 million), a reflection of our increasing involvement in this area. No write-ups were made in the quarter.

The net balance of gains realised on disposals stood at EUR 45.0 million (EUR 54.1 million) and was attributable in large measure to regrouping activities as part of regular portfolio maintenance and to dividends paid by our subsidiaries.

We recognise a derivative for the credit risk associated with special life reinsurance treaties (ModCo) under which securities deposits are held by cedants for our account; the performance of this derivative in the period under review gave rise to unrealised gains of EUR 0.0 million (EUR 1.6 million) recognised in investment income. The inflation swaps taken out in 2010 to hedge part of the inflation risks associated with the loss reserves in our technical account have produced unrealised losses in the year to date of -EUR 15.1 million

(EUR 1.2 million) recognised in investment income. These changes in fair value are recognised in income as a derivative pursuant to IAS 39. Altogether, the unrealised losses on our assets recognised at fair value through profit or loss amounted to -EUR 10.6 million. These contrasted with unrealised gains of EUR 7.4 million in the corresponding period of the previous year.

Our investment income of EUR 415.7 million was considerably higher than in the comparable period (EUR 361.2 million). In view of the low level of interest rates, we are highly satisfied to have been able to boost our ordinary investment income in part through increased income from fixed-income securities. The special effect in life and health reinsurance and stronger income from real estate were, however, also significant factors here. The reduced result from our assets measured at fair value through profit or loss and the lower realised gains were thus comfortably offset. Income from assets under own management totalled EUR 316.6 million (EUR 272.5 million), equivalent to an annualised return (excluding effects from ModCo derivatives and inflation swaps) of 3.5%. This is clearly in excess of our target for 2015 of 3.0%.

Net investment income

Opportunity and risk report

Risk report

- We are well capitalised, and our available capital comfortably exceeds the required capital
- We are convinced that our risk management system gives us a transparent overview of the current risk situation at all times and that we are optimally prepared for Solvency II

Risk landscape of Hannover Re

In the context of its business operations the Hannover Re Group enters into a broad variety of risks. These risks are deliberately accepted, steered and monitored in order to be able to act on the associated opportunities. The parameters and decisions of the Executive Board with respect to the risk appetite of the Hannover Re Group, which are based on the calculations of risk-bearing capacity, are fundamental to the acceptance of risks. Through our business operations on all continents and the diversification between our Property & Casualty and Life & Health reinsurance business groups we are able to effectively allocate our capital in light of opportunity and risk considerations and generate a higher-than-average return on equity. Along with our principal business operations as a reinsurer of property & casualty and life & health business, we also transact primary insurance in selected niche markets as a complement to our core reinsurance business. With this approach we are well positioned for further profitable growth. In this context crucial importance attaches to our risk management in order to ensure that, among other things, risks to the reinsurance portfolio remain calculable and even exceptional major losses do not have an unduly adverse impact on the result. The risk landscape of Hannover Re encompasses:

- underwriting risks in property & casualty and life & health reinsurance which originate from our business activities and manifest themselves inter alia in fluctuations in loss estimates as well as in unexpected catastrophes and changes in biometric factors such as mortality,
- market risks which arise in connection with our investments and also as a consequence of the valuation of sometimes long-term payment obligations associated with the technical account,
- counterparty default risks resulting from our diverse business relationships and payment obligations inter alia with clients and retrocessionaires,
- operational risks which may derive, for example, from deficient processes or systems and
- other risks, such as reputational and liquidity risks.

At the present time our most significant risks are the credit and spread risks within the market risks, the reserving and catastrophe risks within the underwriting risks of property and casualty reinsurance and the risk of changes in mortality within the underwriting risks of life and health reinsurance. With regard to mortality risks, as a general principle annuity portfolios are impacted by improvements in mortality while death benefit portfolios are adversely affected by deteriorations in mortality.

Strategy implementation

We revised our corporate strategy in the previous year. It encompasses ten fundamental strategic principles which safeguard the realisation of our vision “Long-term success in a competitive business” across the various divisions. The following principles of the corporate strategy constitute the key strategic points of departure for our Group-wide risk management:

- We manage risks actively.
- We maintain an adequate level of capitalisation.
- We are committed to sustainability, integrity and compliance.

The risk strategy is derived from our corporate strategy. It forms the core element in our handling of opportunities and risks. The risk strategy specifies more closely the goals of risk management and documents our understanding of risk. We have defined ten overriding principles within our risk strategy:

1. We adhere to the risk appetite set by the Executive Board.
2. We integrate risk management into value-based management.
3. We promote an open risk culture and the transparency of our risk management system.
4. We strive for the highest ERM rating and the approval of our internal model.
5. We determine a materiality threshold for our risks.
6. We make use of appropriate quantitative methods.

7. We apply well-suited qualitative methods.
8. We allocate our capital risk-based.
9. We ensure the necessary separation of functions within our organisational structure.
10. We assess the risk contribution from new business areas and new products.

The risk strategy is similarly specified with an increasing degree of detail on the various levels of the company.

The risk strategy and the major guidelines derived from it, such as the Framework Guideline on Risk Management and the central system of limits and thresholds, are reviewed at least once a year. In this way we ensure that our risk management system is kept up-to-date.

We manage our total enterprise risk such that we can expect to generate positive Group net income with a probability of 90% p. a. and the likelihood of the complete loss of our economic capital and shareholders' equity does not exceed 0.03% p. a. These indicators are monitored using our internal capital model and the Executive Board is informed quarterly about adherence to these key parameters as part of regular reporting. The necessary equity resources are determined according to the requirements of our economic capital model, solvency regulations, the expectations of rating agencies with respect to our target rating and the expectations of our clients. Above and beyond that, we maintain a capital cushion in order to be able to act on new business opportunities at any time.

Major external factors influencing risk management

Regulatory developments: Solvency II is a reform of insurance supervision law in Europe, the implementation of which on 1 January 2016 poses enormous challenges for the entire (re)insurance industry. Along with redefining capital requirements, Solvency II places additional demands on companies' internal management systems and on the information to be disclosed by undertakings to the regulator and the public at large. Further more specific aspects of Solvency II were defined in 2014, including among other things a new draft of the delegated act. Hannover Re has been progressively implementing the new requirements in recent years. In view of our internal target capitalisation with a confidence level of 99.97%, which comfortably exceeds the level of 99.5% envisaged for target capitalisation under Solvency II, the capital requirements of Solvency II do not present any additional hurdle for our company. The core functions of Solvency II – the risk management function, the actuarial function, the compliance function and the internal audit function – have been implemented along existing processes and organisational structures at Hannover Re. Additional staff had to be taken on

and extra systems deployed as part of the launch phase, first and foremost in order to be able to meet internal and external reporting requirements.

Parallel to the regulatory developments in Europe, we are seeing adjustments worldwide to the regulation of (re)insurance undertakings. It is often the case that various local supervisory authorities take their lead from the principles of Solvency II or the requirements set out by the International Association of Insurance Supervisors (IAIS).

Above and beyond this, further capital requirements for large, internationally operating (re)insurance groups are to be anticipated in the future. These requirements are under development by the IAIS and the Financial Stability Board (FSB).

Risk capital

In the interests of our shareholders and clients we strive to ensure that our risks remain commensurate with our capital resources. Our quantitative risk management provides a uniform framework for the evaluation and steering of all risks affecting the company as well as of our capital position. In this context, the internal capital model is our central tool. The internal capital model of the Hannover Re Group is a stochastic enterprise model. It covers all subsidiaries and business groups of the Hannover Re Group. The central variable in risk and enterprise management is the economic capital, which is calculated according to market-consistent measurement principles and in many respects corresponds to the own funds under Solvency II. Hannover Re's internal capital model reflects all risks that influence the development of the economic capital. They are split into underwriting risks, market risks, counterparty default risks and operational risks. For each of these risk classes we have identified a number of risk factors for which we define probability distributions. These risk factors include, for example, economic indicators such as interest rates, exchange rates and inflation indices, but also insurance-specific indicators such as the mortality of a particular age group within our portfolio of insureds in a particular country or the number of natural catastrophes in a certain region and the insured loss amount per catastrophe. The specification of the probability distributions for the risk factors draws upon historical and publically available data as well as on the internal data resources of the Hannover Re Group. The process is further supplemented by the know-how of internal and external experts. The fit of the probability distributions is regularly checked by our specialist departments, although more importantly it is also verified in the context of the regular, company-wide use of the capital model when assessing risks and allocating the cost of capital. Hannover Re calculates the required risk capital as the Value at Risk (VaR) of the economic change in value over a period of one year

with a confidence level of 99.97%. This reflects the goal of not exceeding a one-year ruin probability of 0.03%. The internal target capitalisation of the Hannover Re Group is therefore significantly higher than the confidence level of 99.5% which will be required in future under Solvency II. It goes without saying that Hannover Rück SE also meets the current capital requirements set by regulators. The capital adequacy ratio of Hannover Rück SE under Solvency I stood at 136% as at 31 December 2014. Since the corresponding calculation is neither market-consistent nor risk-based a relevant comparison with the coverage ratio under the internal capital model is not possible.

The Hannover Re Group is seeking approval of its internal model for the determination of regulatory capital under Solvency II. If approval is given and depending on the final measurement rules of Solvency II, the capitalisation with a confidence level of 99.5% constitutes an indication of the fulfilment of future regulatory requirements. Our excess capital coverage at the target confidence level of 99.97% is currently very comfortable. Hannover Re is well capitalised and our available capital comfortably exceeds the currently required capital.

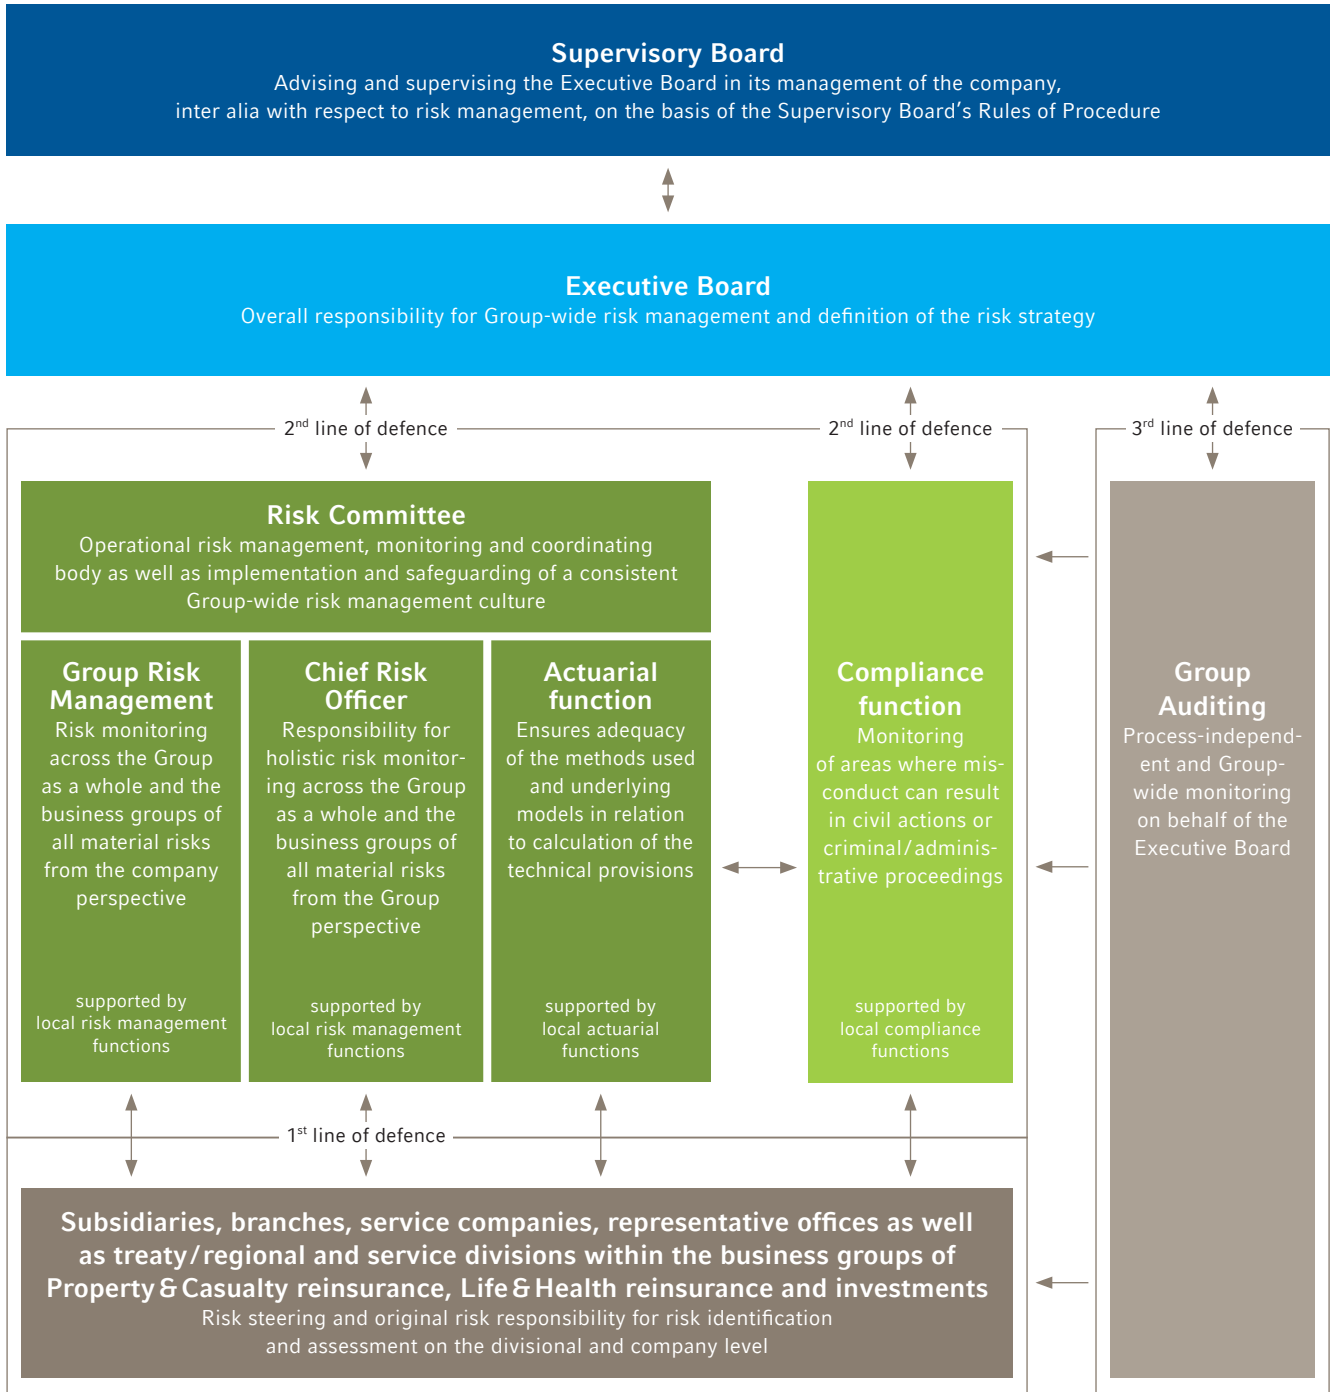

We hold additional capital above all to meet the requirements of the rating agencies for our target rating and to be able to act flexibly on business opportunities. We strive for a rating from the rating agencies most relevant to our industry that facilitates and secures our access to all reinsurance business worldwide. Hannover Re is analysed by the rating agencies Standard & Poor's (S & P) and A.M. Best as part of an interactive rating process, meaning that both these rating agencies are also given access to confidential information about Hannover Re. The current financial strength ratings are assessed as "AA-" (Very Strong, stable outlook) by Standard & Poor's and "A+" (Superior, stable outlook) by A.M. Best. Standard & Poor's evaluates Hannover Re's risk

management as "Very Strong", the best possible rating. The ratings highlight, in particular, the company's very good risk management, the consistent and systematic implementation of corporate strategy by management and the excellent capital resources. Hannover Re's internal capital model is also examined as part of the rating. Based on this review, Standard & Poor's factors the results of the internal capital model of the Hannover Re Group into the determination of the target capital for the rating.

Organisation and processes of risk management

Hannover Re has set up risk management functions and bodies Group-wide to safeguard an efficient risk management system. The organisation and interplay of the individual functions in risk management are crucial to our internal risk steering and control system. The central functions of risk management are closely interlinked in our system and the roles, tasks and reporting channels are clearly defined and documented in terms of the so-called "3 lines of defence". The first line of defence consists of risk steering and the original risk responsibility on the divisional or company level. The second line of defence consists of the core functions of risk management, the actuarial function and the compliance function. These units are responsible for monitoring and control. The third line of defence is the process-independent monitoring performed by the internal audit function. The following chart provides an overview of the central functions and bodies within the overall system as well as of their major tasks and powers.

The risk management functions meet regularly, e.g. in the context of the Group Risk Management Meeting (GRiMM), in order to support Group-wide risk communication and establish an open risk culture.

Key elements of the risk management system

Our risk strategy, the Framework Guideline on Risk Management and the system of limits and thresholds for material risks of the Hannover Re Group describe the central elements of our risk management system. The risk management system is subject to a constant cycle of planning, action, control and improvement. Systematic risk identification, analysis, measurement, steering and monitoring as well as risk reporting are especially crucial to the effectiveness of the system as a whole.

The Framework Guideline on Risk Management describes, among other things, the major tasks, rights and responsibilities, the organisational framework conditions and the risk control process. The rules, which are derived from the corporate strategy and the risk strategy, additionally take account of the regulatory minimum requirements for risk management as well as international standards and developments relating to appropriate enterprise management.

Risk-bearing capacity concept

The establishment of the risk-bearing capacity involves determining the total available risk coverage potential and calculating how much of this is to be used for covering all material risks. This is done in conformity with the parameters of the risk strategy and the risk appetite defined by the Executive Board. The quantitatively measurable individual risks and the risk position as a whole are evaluated using our risk model. A central system of limits and thresholds is in place to monitor material risks. This system incorporates – along with other risk-related key figures – in particular the indicators derived and calculated from the risk-bearing capacity. Adherence to the overall risk appetite is verified using the results of the risk model. The calculation is updated half-yearly.

Risk identification

A key source of information for monitoring risks is the risk identification carried out on a rotating basis. All identified risks are documented in the central register containing all material risks. Risk identification takes the form of, for example, structured assessments, interviews or scenario analyses. External insights such as recognised industry know-how from relevant bodies or working groups are incorporated into the process. Risk identification is important for ensuring that our risk management consistently remains up-to-date.

Risk analysis and assessment

In principle, every risk that is identified and considered material is quantitatively assessed. Only risk types for which quantitative risk measurement is currently impossible or difficult are qualitatively assessed (e.g. strategic risks or reputational risks). Qualitative assessment takes the form of inter alia expert evaluations. Quantitative assessment of material risks and the overall risk position is performed by Group Risk Management using the Hannover Re risk model. The model makes allowance as far as possible for risk accumulations and concentrations.

Risk steering

The steering of all material risks is the task of the operational business units on the divisional and company level. In this context, the identified and analysed risks are either consciously accepted, avoided or minimised. The risk/reward ratio and the required capital are factored into the division's decision. Risk steering is assisted by, among other things, the parameters of the central and local underwriting guidelines and by defined limits and thresholds.

Risk monitoring

The monitoring of all identified material risks is a core task of Group Risk Management. This includes, inter alia, monitoring execution of the risk strategy as well as adherence to the defined limits and thresholds and to risk-related methods and processes. A further major task of risk monitoring is the ascertainment of whether risk steering measures were carried out and whether the planned effect of the measures is sufficient.

Risk communication and risk culture

Risk management is firmly integrated into our operational processes. It is assisted by transparent risk communication and the open handling of risks as part of our risk culture. Risk communication takes the form, for example, of internal and external risk reports, information on current risk complexes in the intranet and training opportunities for staff. The regular sharing of information between risk-steering and risk-monitoring units is also fundamental to the proper functioning of risk management.

Risk reporting

Our risk reporting provides systematic and timely information about all material risks and their potential implications. The central risk reporting system consists primarily of regular risk reports, e.g. on the overall risk situation, adherence to the parameters defined in the risk strategy or on the capacity utilisation of natural catastrophe scenarios. Complementary to the regular risk reporting, immediate internal reporting on material risks that emerge at short notice takes place as necessary. The already existing range of risk reports will be supplemented in the context of Solvency II implementation by further reports, including for example the "Regular Supervisory Report" (RSR) and the "Solvency and Financial Condition Report" (SFCR).

Process-integrated/-independent monitoring and quality assurance

The Executive Board is responsible for the orderly organisation of the company's business irrespective of internally assigned competencies. This also encompasses monitoring of the internal risk steering and control system. Process-independent monitoring and quality assurance of risk management is carried out by the internal audit function and external instances (regulators, independent auditors and rating agencies). Most notably, the independent auditors review the trigger mechanism and the internal monitoring system. The entire system is rounded off with process-integrated procedures and rules, such as those of the internal control system.

Internal control system

We organise our business activities in such a way that they are always in conformity with all legal requirements. The internal control system (ICS) is an important subsystem that serves, among other things, to secure and protect existing assets, prevent and reveal errors and irregularities and comply with laws and regulations. The core elements of Hannover Re's ICS are documented in a Framework Guideline that establishes a common understanding of the differentiated execution of the necessary controls. In the final analysis, it is designed to systematically steer and monitor the implementation of our corporate strategy. The Framework Guideline defines concepts, stipulates responsibilities and provides a guide for the description of controls. In addition, it forms the basis for the accomplishment of internal objectives and the fulfilment of external requirements imposed on Hannover Re. The ICS consists of systematically structured organisational and technical measures and controls within the enterprise.

This includes, among other things:

- the principle of dual control,
- separation of functions,
- documentation of the controls within processes,
- and technical plausibility checks and access privileges in the IT systems.

The proper functioning of the ICS necessitates the involvement of management, executive staff and employees on all levels. The financial reporting of the parent company and the Group must satisfy international and national financial reporting standards as well as regulatory requirements. This is safeguarded in the area of accounting and financial reporting by processes with integrated controls which ensure the completeness and accuracy of the annual and consolidated financial statements. A structure made up of differentiated criteria, control points and materiality thresholds assures our ability to identify and minimise the risk of material errors in the annual and consolidated financial statements at an early stage.

We use a central IT solution with standardised accounting and consolidation processes, posting rules and interfaces for data delivery in order to draw up the consolidated financial statement. Access rights for the reporting systems are assigned through an approval process. All components of the accounting-related internal control system, the processes for the organisation and implementation of consolidation tasks and for the preparation of the consolidated financial statement as well as the accompanying controls are consistently documented. In order to safeguard and continuously improve the adequacy of the control system it is subject to regular review and evaluation. In this regard, the internal audit function ensures that the quality of the control system is constantly monitored. All relevant accounting principles are collated in a Group Accounting Manual that sets out uniform Group-wide rules for the recognition, measurement and reporting of items in the consolidated financial statement. The process for updating and, if necessary, adjusting these rules is clearly regulated with respect to information channels, responsibilities and period of validity. Not only that, we provide prompt Group-wide notification of significant developments and modified requirements in Group financial reporting.

Within the scope of our control system the Group companies are responsible for Group-wide adherence to the accounting policies and the internal control guidelines. The managing directors and chief financial officers of the Group companies defined as material in our control system affirm to the Executive Board of Hannover Rück SE at each closing date the completeness, correctness and reliability of the financial data that they pass on to Group Accounting. Data for the preparation of the consolidated financial statement is delivered using a Web-based IT application. The relevant data for Group financial reporting is collected in a database and processed via automatic interfaces in a consolidation system. As part of the financial reporting process we perform preventive and detective checks on the reported figures in order to minimise the probability and reduce the impacts of a potentially incorrect disclosure. Depending upon the results of our checks, these figures can be corrected if necessary. Given that our Group financial reporting is heavily dependent on IT systems, these systems also need to be subject to controls. Authorisation concepts regulate system access and for each step content-based as well as system-side checks have been implemented, by means of which errors are analysed and promptly eliminated.

Internal risk assessment

Hannover Re calculates the economic equity as the difference between the market-consistent value of the assets and the market-consistent value of the liabilities. The corresponding measurement principles also largely apply to the Intrinsic Value Creation (IVC). While fair values are available for most investments, the market-consistent valuation of reinsurance treaties necessitates a specific valuation model. We establish the market-consistent value of technical items as the present value of projected payments using actuarial methods. This is adjusted by a risk loading that factors in the fluctuation in future payments. Such fluctuations result from risks that cannot be hedged by means of capital market products, such as underwriting risks. We use risk-free interest rates derived from yields on the highest-quality government bonds for discounting of our future cash flows. Market prices for options and guarantees embedded in insurance contracts are determined or approximated using option valuation models from the field of financial mathematics. The methods used are the same as those adopted in the calculation of our Market Consistent Embedded Value (MCEV). The significance of these options and guarantees in our portfolio is, however, minimal.

The available economic capital, which is available as liable capital for policyholders, is composed of the economic equity and the hybrid capital. The internal capital model is based on current methods from actuarial science and financial mathematics. In the case of underwriting risks, we are able to draw on a rich internal data history to estimate the probability distributions, e.g. for the reserve risk. For risks from natural perils we use external models, which are adjusted in the context of a detailed internal review process such that they reflect our risk profile as closely as possible. In the area of life and health reinsurance long-term payment flows are modelled under various scenarios. With respect to all the aforementioned risks we use internal data to define scenarios and probability distributions. The internal data is enhanced by way of parameters set by our internal experts. These parameters are especially significant in relation to extreme events that have not previously been observed.

When it comes to aggregating the individual risks, we make allowance for dependencies between risk factors. Dependencies arise, for example, as a consequence of market shocks, such as the financial crisis, which simultaneously impact multiple market segments. What is more, several observation periods may be interrelated on account of market phenomena such as price cycles. In dealing with these dependencies, however, it is our assumption that not all extreme events occur at the same time. The absence of complete dependency

is referred to as diversification. Hannover Re's business model is based inter alia on building up the most balanced possible portfolio so as to achieve the greatest possible diversification effects and in order to deploy capital efficiently. Diversification exists between individual reinsurance treaties, lines, business segments and risks. We define the cost of capital to be generated per business unit according to the capital required by our business segments and lines and based on their contribution to diversification.

Underwriting risks in property and casualty reinsurance

Risk management in property and casualty reinsurance has defined various overall guidelines for efficient risk steering. These include, among other things, the limited use of retrocessions to reduce volatility and conserve capital. It is also crucially important to consistently maximise the available risk capacities on the basis of the risk management parameters of the Hannover Re Group and to steer the acceptance of risks systematically through the existing central and local underwriting guidelines. Our conservative reserving level is a crucial factor in our risk management. We make a fundamental distinction between risks that result from business operations of past years (reserve risk) and those stemming from activities in the current or future years (price/premium risk). In the latter case, special importance attaches to the catastrophe risk. Diversification within the Property & Casualty reinsurance business group is actively managed through allocation of the cost of capital according to the contribution made to diversification. A high diversification effect arises out of the underwriting of business in different lines and different regions with different business partners.

The reserve risk, i.e. the risk of under-reserving losses and the resulting strain on the underwriting result, is the overriding priority in our risk management. We attach the utmost importance to a conservative reserving level and therefore traditionally have a high confidence level. In order to counter the risk of under-reserving we calculate our loss reserves based on our own actuarial estimations and establish, where necessary, additional reserves supplementary to those posted by our cedants as well as the segment reserve for losses that have already occurred but have not yet been reported to us.

Statistical run-off triangles are another monitoring tool used by our company. They show the changes in the reserve over time as a consequence of paid claims and in the recalculation of the reserves to be established as at each balance sheet date. Their adequacy is monitored using actuarial methods.

In order to partially hedge inflation risks Hannover Re has taken out inflation swaps (USD and EUR zero coupon swaps) and invested in inflation-linked instruments that protect parts of the loss reserves against inflation risks. An inflation risk exists particularly inasmuch as the liabilities (e.g. loss reserves) could develop differently than assumed at the time when the reserve was constituted because of inflation. Since 2012 we have also increasingly obtained parts of the inflation protection for our loss reserves by purchasing bonds with inflation-linked coupons and redemption amounts.

Licensed scientific simulation models, supplemented by the expertise of our own specialist departments, are used to assess our material catastrophe risks from natural hazards (especially earthquake, windstorm and flood). Furthermore, we establish the risk to our portfolio from various scenarios in the form of probability distributions. The monitoring of the risks resulting from natural hazards is rounded out by realistic extreme loss scenarios. Within the scope of this process, the Executive Board defines the risk appetite for natural perils once a year on the basis of the risk strategy by specifying the portion of the economic capital that is available to cover risks from natural perils. This is a key basis for our underwriting approach in this segment. As part of our holistic approach to risk management across business groups, we take into account numerous relevant scenarios and extreme scenarios,

determine their effect on portfolio and performance data, evaluate them in relation to the planned figures and identify alternative courses of action. For the purposes of risk limitation, maximum amounts are also stipulated for various extreme loss scenarios and return periods in light of profitability criteria. Adherence to these limits is continuously verified by Group Risk Management. The Risk Committee, Executive Board and Property & Casualty Executive Committee are kept regularly updated on the degree of capacity utilisation.

The price/premium risk lies primarily in the possibility of a random claims realisation that diverges from the claims expectancy on which the premium calculation was based. Regular and independent reviews of the models used for treaty quotation as well as central and local underwriting guidelines are vital management components. We have put in place a multi-step quotation process to ensure the quality of our portfolios. In addition, Hannover Re's regional and treaty departments prepare regular reports on the progress of their respective renewals. The reporting in this regard makes reference inter alia to significant changes in conditions, risks (such as inadequate premiums) as well as to emerging market opportunities and the strategy pursued in order to accomplish targets. The development of the combined ratio in property and casualty reinsurance is shown in the table below:

Combined and catastrophe loss ratio

in %	Q1 2015	2014	2013	2012	2011	2010	2009	2008	2007	2006	2005 ¹
Combined ratio (property and casualty reinsurance)	95.7	94.7	94.9	95.8	104.3	98.2	96.6	95.4	99.7	100.8	112.8
Thereof catastrophe losses ²	3.3	6.1	8.4	7.0	16.5	12.3	4.6	10.7	6.3	2.3	26.3

¹ Including financial reinsurance and specialty insurance

² Net share of the Hannover Re Group for natural catastrophes and other major claims in excess of EUR 10 million gross as a percentage of net premium earned (until 31 December 2011: in excess of EUR 5 million gross)

Underwriting risks in life and health reinsurance

All risks directly connected with the life of an insured person are referred to as biometric risks. They include in particular the miscalculation of mortality, life expectancy, morbidity and occupational disability. Biometric risks are the material risks for our company in the area of life and health reinsurance. Our goal is to strike a balance between biometric risks. Counterparty and lapse risks are also material since we additionally prefinance our cedants' new business acquisition costs. Furthermore, we are exposed to catastrophe risks, especially catastrophes involving a high number of fatalities in our insurance portfolio.

The reserves are determined on the basis of secure biometric actuarial bases in light of the information provided by our clients. The biometric actuarial bases used and the lapse assumptions are continuously reviewed with an eye to their adequacy and if necessary adjusted. This is done using the company's own empirical data as well as market-specific insights. Our current risk profile in life and health reinsurance is dominated by mortality and longevity risks. This is due to the fact that under some of our contracts we pay death benefits, while under others we pay survival benefits. The volume of our annuity portfolios has continued to grow and contributes to diversification within life and health reinsurance.

Diversification is a central management tool for our company. We seek to spread risks as far as possible across different risk classes and different regions. In our pricing of reinsurance treaties we provide incentives to further increase diversification.

Through our quality assurance measures we ensure that the reserves established by ceding companies in accordance with local accounting principles satisfy all requirements with respect to the calculation methods used and assumptions made (e.g. use of mortality and morbidity tables, assumptions regarding the lapse rate). New business is written in all regions in compliance with underwriting guidelines applicable worldwide, which set out detailed rules governing the type, quality, level and origin of risks. These global guidelines are revised annually and approved by the Executive Board. Special underwriting guidelines give due consideration to the particular features of individual markets. By monitoring compliance with these underwriting guidelines we minimise the risk of an inability to pay or of deterioration in the financial status of cedants. Regular reviews and holistic analyses (e.g. with an eye to lapse risks) are carried out with respect to new business activities and the assumption of international portfolios. The actuarial reports and documentation required by local regulators ensure that regular scrutiny also takes place on the level of the subsidiaries. The interest rate risk, which in the primary sector is important in life business owing to the guarantees that are given, is of only minimal relevance to our company thanks to the design of our reinsurance treaties. We

have confidence in the entrepreneurial abilities of our underwriters and grant them the most extensive possible powers. In our decentralised organisation we manage risks where they arise using a consistent Group-wide approach in order to obtain an overall view of the risks in life and health reinsurance. Our global underwriting guidelines provide underwriters with an appropriate framework for this purpose. Another major element of risk management in life and health reinsurance is the Market Consistent Embedded Value (MCEV). The MCEV is a ratio used for the valuation of life insurance and reinsurance business; it is calculated as the present value of the future shareholders' earnings from the worldwide life and health reinsurance portfolio plus the allocated capital. The calculation makes allowance as far as possible for all risks included in this business. For detailed information please see the MCEV report for 2014 published on our website.

Market risks

Faced with a challenging capital market climate, particularly high importance attaches to preserving the value of assets under own management and the stability of the return. Hannover Re's portfolio is therefore guided by the principles of a balanced risk/return profile and broad diversification. Based on a risk-averse asset mix, the investments reflect both the currencies and durations of our liabilities. Market price risks include equity risks, interest rate risks, currency risks, real estate risks, spread risks and credit risks.

With a view to preserving the value of our assets under own management, we constantly monitor adherence to a trigger mechanism based on a clearly defined traffic light system that is applied across all portfolios. This system defines clear thresholds and escalation channels for the cumulative fluctuations in fair value and realised gains/losses on investments since the beginning of the year. These are unambiguously defined in conformity with our risk appetite and trigger specified information and escalation channels if a corresponding fair value development is overstepped. Despite the conservative orientation of our investment portfolio, it profited substantially from movements in interest rates and spreads over the course of the year and consistently boosted its fair value reserves. The escalation levels of the trigger mechanism were not activated at any point in time.

The short-term loss probability measured as the "Value at Risk" (VaR) is another vital tool used for monitoring and managing market price risks. It is calculated on the basis of historical data, e.g. the volatility of the securities positions under own management and the correlation between these risks. As part of these calculations the decline in the fair value of our portfolio is simulated with a certain probability and within a certain period. The VaR of the Hannover Re Group determined in accordance with these principles specifies the decrease in the fair value of our securities portfolio under own management that with a probability of 95% will not

be exceeded within ten trading days. A multi-factor model is used to calculate the VaR indicators for the Hannover Re Group. It is based on time series of selected representative market parameters (equity prices, yield curves, spread curves, exchange rates, commodity prices and macro-economic variables). All asset positions are mapped on the level of individual positions within the multi-factor model; residual risks (e.g. market price risks that are not directly explained by the multi-factor model) can be determined through back-calculation and are incorporated into the overall calculation. The model

takes into account interest rate risks, credit and spread risks, systematic and specific equity risks, commodity risks and option-specific risks.

Stress tests are conducted in order to be able to map extreme scenarios as well as normal market scenarios for the purpose of calculating the Value at Risk. In this context, the loss potentials for fair values and shareholders' equity (before tax) are simulated on the basis of already occurred or notional extreme events.

Scenarios for changes in the fair value of material asset classes

in EUR million	Scenario	Portfolio change on a fair value basis	Change in equity before tax
Equity securities and private equity	Share prices -10%	-76.4	-76.4
	Share prices -20%	-152.9	-152.9
	Share prices +10%	+76.4	+76.4
	Share prices +20%	+152.9	+152.9
Fixed-income securities	Yield increase +50 basis points	-822.2	-706.5
	Yield increase +100 basis points	-1,605.3	-1,379.3
	Yield decrease -50 basis points	+846.6	+725.8
	Yield decrease -100 basis points	+1,730.2	+1,482.5

Further significant risk management tools – along with the various stress tests used to estimate the loss potential under extreme market conditions – include sensitivity and duration analyses and our asset/liability management (ALM). The internal capital model provides us with quantitative support for the investment strategy as well as a broad diversity of VaR calculations. In addition, tactical duration ranges are in place, within which the portfolio can be positioned opportunistically according to market expectations. The parameters for these ranges are directly linked to our calculated risk-bearing capacity.

Share price risks derive from the possibility of unfavourable changes in the value of equities, equity derivatives or equity index derivatives in our portfolio. We hold such assets only on a very modest scale as part of strategic participations. The scenarios for changes in equity prices consequently have only extremely slight implications for our portfolio.

The portfolio of fixed-income securities is exposed to the interest rate risk. Declining market yields lead to increases and rising market yields to decreases in the fair value of the fixed-income securities portfolio.

The credit spread risk should also be mentioned. The credit spread refers to the interest rate differential between a risk-tailing bond and risk-free bond with the same maturity. Changes in these risk premiums, which are observable on the market, result – analogously to changes in pure market yields – in changes in the fair values of the corresponding securities.

Currency risks are especially relevant if there is a currency imbalance between the technical liabilities and the assets. Through extensive matching of currency distributions on the assets and liabilities side, we reduce this risk on the basis of the individual balance sheets within the Group. The short-term Value at Risk therefore does not include quantification of the currency risk. We regularly compare the liabilities per currency with the covering assets and optimise the currency coverage in light of various collateral conditions such as different accounting requirements by regrouping assets. Remaining currency surpluses are systematically quantified and monitored within the scope of economic modelling.

Real estate risks result from the possibility of unfavourable changes in the value of real estate held either directly or through fund units. They may be caused by a deterioration in particular qualities of a property or by a general downside in market values. Real estate risks continued to grow in importance for our portfolio owing to our ongoing involvement in this sector. We spread these risks through broadly diversified investments in high-quality markets of Germany, Europe as a whole and the United States; each investment is preceded by detailed analyses of the property, manager and market in question.

We use derivative financial instruments only to the extent needed to hedge risks. The primary purpose of such financial instruments is to hedge against potentially adverse situations on capital markets. A modest portion of our cash flows from the insurance business as well as currency risks arising

because currency matching cannot be efficiently achieved are partially hedged using forward exchange transactions. In order to partially hedge inflation risks Hannover Re has taken out inflation swaps (USD and EUR zero coupon swaps) that protect parts of the loss reserves against inflation risks. Hannover Re holds further derivative financial instruments to hedge interest rate risks from loans taken out to finance real estate. Contracts are concluded with reliable counterparties and for the most part collateralised on a daily basis so as to avoid credit risks associated with the use of such derivative transactions. The remaining exposures are controlled according to the restrictive parameters set out in the investment guidelines.

Our investments entail credit risks that arise out of the risk of a failure to pay (interest and/or capital repayment) or a change in the credit status (rating downgrade) of issuers of

securities. We attach equally vital importance to exceptionally broad diversification as we do to credit assessment conducted on the basis of the quality criteria set out in the investment guidelines. We measure credit risks in the first place using the standard market credit risk components, especially the probability of default and the potential amount of loss – making allowance for any collateral and the ranking of the individual instruments depending on their effect in each case. We then assess the credit risk first on the level of individual securities (issues) and in subsequent steps on a combined basis on the issuer level.

In order to limit the risk of counterparty default we set various limits on the issuer and issue level as well as in the form of dedicated rating quotas. A comprehensive system of risk reporting ensures timely reporting to the functions entrusted with risk management.

Rating structure of our fixed-income securities¹

Rating classes	Government bonds		Securities issued by semi-governmental entities ²		Corporate bonds		Covered bonds/asset-backed securities	
	in %	in EUR million	in %	in EUR million	in %	in EUR million	in %	in EUR million

¹ Securities held through investment funds are recognised pro rata with their corresponding individual ratings.

² Including government-guaranteed corporate bonds

The measurement and monitoring mechanisms that have been put in place safeguard a prudent, broadly diversified investment strategy. This is reflected inter alia in the fact that within our portfolio of assets under own management the exposures to government bonds or instruments backed by sovereign guarantees issued by the so-called GIIPS states (Greece, Ireland, Italy, Portugal, Spain) amount to altogether just EUR 264.1 million on a fair value basis. This corresponds to a proportion of 0.7%. The individual countries account for the following shares: Spain EUR 134.7 million, Italy EUR 70.4 million, Ireland EUR 31.0 million and Portugal EUR 28.0 million. No impairments had to be taken on these holdings. Our portfolio does not contain any bonds of Greek issuers. On a fair value basis EUR 4,668.8 million of the corporate bonds held by our company were issued by entities in the financial sector. Of this amount, EUR 3,909.7 million was attributable to banks. The vast majority of these bank bonds (74.4%) are rated “A” or better. Our investment portfolio under own management does not contain any written or issued credit default swaps.

Counterparty default risks

The counterparty default risk consists primarily of the risk of complete or partial failure of the counterparty and the associated default on payment. Since the business that we accept is not always fully retained, but instead portions are retroceded as necessary, the counterparty default risk is material for our company in reinsurance transactions. Our retrocession partners are carefully selected and monitored in light of credit considerations in order to keep the risk as small as possible. This is also true of our broker relationships, which entail a risk inter alia through the potential loss of the premium paid by the cedant to the broker. We minimise these risks, among other things, by reviewing all broker relationships once a year with an eye to criteria such as the existence of professional indemnity insurance, payment performance and proper contract implementation. The credit status of retrocessionaires is continuously monitored. On the basis of this ongoing monitoring a Security Committee decides on measures where necessary to secure receivables that appear to be at risk of

default. This process is supported by a Web-based risk management application, which specifies cession limits for the individual retrocessionaires participating in protection cover programmes and determines the capacities still available for short-, medium- and long-term business. Depending on the type and expected run-off duration of the reinsured business, the selection of reinsurers takes into account not only the minimum ratings of the rating agencies Standard & Poor's and A.M. Best but also internal and external expert assessments (e.g. market information from brokers). Overall, retrocessions conserve our capital, stabilise and optimise our results and enable us to act on opportunities across a broader front, e.g. following a major loss event. Regular visits to our retrocessionaires give us a reliable overview of the market and put us in a position to respond quickly to capacity changes. Alongside traditional retrocessions in property and casualty reinsurance we also transfer risks to the capital market.

Counterparty default risks are also relevant to our investments and in life and health reinsurance because we prefinance acquisition costs for our ceding companies. Our clients, retrocessionaires and broker relationships as well as our investments are therefore carefully evaluated and limited in light of credit considerations and are constantly monitored and controlled within the scope of our system of limits and thresholds. In terms of the Hannover Re Group's major companies, EUR 338.8 million (8.1%) of our accounts receivable from reinsurance business totalling EUR 4,157.5 million were older than 90 days as at the balance sheet date. The average default rate over the past three years was 0.1%.

Operational risks

Operational risks refer to the risk of losses occurring because of the inadequacy or failure of internal processes or as a result of events triggered by employee-related, system-induced or external factors. In contrast to underwriting risks (e.g. the reserve risk), which we enter into in a deliberate and controlled manner in the context of our business activities, operational risks are an indivisible part of our business activities. The focus is therefore on risk avoidance and risk minimisation. As a derivation from our strategic principle "We manage risks actively", we act according to the following principles in relation to operational risks:

1. We integrate operational risk management into the company and its culture.
2. We manage operational risks proactively and sustainably.
3. We consider events and scenarios that cover the entire spectrum of operational risks.
4. We strive for appropriate risk reduction through our measures.
5. We manage within defined limits and create transparency through measurements.

With the aid of the Self-Assessment for Operational Risks we determine the maturity level of our operational risk management system and define action fields for improvements. The assessment is carried out, for example, by assessing the maturity level of the respective risk management function or of the risk monitoring and reporting. The system enables us, among other things, to prioritise operational risks and is used inter alia to calculate the capital commitment in our internal model.

The change in risk capital in the period under review can be attributed primarily to the increased business volume and the resulting higher exposure for operational risks.

Within the overall framework of operational risks we consider, in particular, business process risks, compliance risks, risks associated with sales channels and outsourcing of functions, fraud risks, personnel risks, information technology risks / information security risks and business interruption risks.

Business process risks are associated with the risk of deficient or flawed internal processes, which can arise as a consequence of an inadequate process organisation. We have defined criteria to evaluate the maturity level of the material processes, e.g. for the reserving process. This enables us to ensure that process risks are monitored. In cooperation with the process participants, the process owner evaluates the risks of the metaprocess and develops measures for known, existing risks. Data quality is also a highly critical success factor, especially in risk management, because – among other things – the validity of the results delivered by the internal model depends primarily on the data provided. The overriding goal of our data quality management is the sustainable improvement and safeguarding of data quality within the Hannover Re Group.

Compliance risks are associated with the risk of breaches of standards and requirements, non-compliance with which may entail lawsuits or official proceedings with not inconsiderable detrimental implications for the business activities of the Hannover Re Group. Regulatory compliance, compliance with the company's Code of Conduct, data privacy and compliance with anti-trust and competition laws have been defined as issues of particular relevance to compliance. The compliance risk also extends to tax and legal risks. Responsibilities within the compliance organisation are regulated and documented Group-wide and interfaces with risk management have been put in place. The set of tools is rounded off with regular compliance training programmes.

In selected market niches we transact primary insurance business that complements our reinsurance activities. In so doing, just as on the reinsurance side, we always work together with partners from the primary sector – such as insurance brokers and underwriting agencies. This gives rise to risks associated with such sales channels, although these are minimised through the careful selection of agencies, mandatory underwriting guidelines and regular checks.

Risks associated with the outsourcing of functions can result from such outsourcing of functions, services and/or organisational units to third parties outside Hannover Re. Mandatory rules have been put in place to limit this risk; among other things, they stipulate that a risk analysis is to be performed prior to a material outsourcing. In the context of this analysis a check is carried out to determine, inter alia, what specific risks exist and whether outsourcing can even occur in the first place.

Fraud risks refer to the risk of intentional violations of laws or regulations by members of staff (internal fraud) and/or by externals (external fraud). This risk is reduced by the internal control system as well as by the audits conducted by Group Auditing on a Group-wide and line-independent basis.

The proper functioning and competitiveness of the Hannover Re Group can be attributed in large measure to the expertise and dedication of our staff. In order to minimise personnel risks, we pay special attention to the skills, experience and motivation of our employees and foster these qualities through outstanding personnel development and leadership activities. Regular employee surveys and the monitoring of turnover rates ensure that such risks are identified at an early stage and scope to take the necessary actions is created.

Information technology risks and information security risks arise, inter alia, out of the risk of the inadequate integrity, confidentiality or availability of systems and information. By way of example, losses and damage resulting from the unauthorised passing on of confidential information, the malicious overloading of important IT systems or from computer viruses are material to the Hannover Re Group. Given the broad spectrum of such risks, a diverse range of steering and monitoring measures and organisational standards, including for example the requirement to conclude confidentiality agreements with service providers, have been put in place. In addition, our employees are made more conscious of such security risks through practically oriented tools provided online in the intranet or by way of training opportunities.

When it comes to reducing business interruption risks, the paramount objective is the quickest possible return to normal operations after a crisis, for example through implementation of existing contingency plans. Guided by internationally accepted standards, we have defined the key framework conditions and – among other measures – we have assembled a crisis team to serve as a temporary body in the event of an emergency. The system is complemented by regular exercises and tests. In the previous year, for example, we compiled a leaflet on correct behaviour in the event of a business interruption; this condenses in compact form the key information that all employees need to know (e.g. information channels in a crisis situation). Regular risk reporting to the Risk Committee and the Executive Board has also been put in place.

Other risks

Of material importance to our company in the category of other risks are primarily emerging risks, strategic risks, reputational risks and liquidity risks.

The hallmark of emerging risks is that the content of such risks cannot as yet be reliably assessed – especially on the underwriting side with respect to our treaty portfolio. Such risks evolve gradually from weak signals to unmistakable tendencies. It is therefore vital to detect these risks at an early stage and then determine their relevance. For the purpose of early detection we have developed an efficient process that spans divisions and lines of business and we have ensured its linkage to risk management. Operational implementation is handled by an expert working group assembled specially for this task. The analyses performed by this working group are used Group-wide in order to pinpoint any necessary measures (e.g. the implementation of contractual exclusions or the development of new reinsurance products). By way of example, the risks arising out of aspects of climate change (e.g. questions of liability) are analysed by this working group. These problematic issues may also have implications for our treaty portfolio – in the form not only of risks but also opportunities, e.g. through increased demand for reinsurance products.

Strategic risks derive from a possible imbalance between the corporate strategy of the Hannover Re Group and the constantly changing general business environment. Such an imbalance might be caused, for example, by incorrect strategic policy decisions, a failure to consistently implement the defined strategies and business plans or an incorrect allocation of resources. We therefore regularly review our corporate strategy in a multi-step procedure and adjust our processes and the resulting guidelines as and when required. The Group Strategy was reviewed in the previous year and the revised corporate strategy was unveiled to investors at the Investors' Day held in London on 23 October 2014. We have defined performance criteria and indicators for the operational implementation of the strategic guidelines; these are authoritative when it comes to determining fulfilment of the various targets. With the "Strategy Cockpit" the Executive Board and responsible managers have at their disposal a strategy tool that assists them with the planning, elaboration and management of strategic objectives and measures and safeguards their overall perspective on the company and its strategic risks. In addition, the process for the management of strategic risks is assessed annually as part of the monitoring of business process risks.

Reputational risks refer to the risk that the trust put in our company by clients, shareholders, employees or the public at large may be damaged. This risk has the potential to jeopardise the business foundation of the Hannover Re Group. A good corporate reputation is therefore an indispensable prerequisite for our core business as a reinsurer. Reputational risks may arise out of all business activities conducted by the Hannover Re Group. Reputational damage may be caused, inter alia, by a data mishap that becomes public knowledge or financial difficulties on account of an underwriting risk. In addition to the risk identification methods already described, we use a number of different techniques for risk minimisation, such as our defined communication channels (e.g. Crisis Communication Guideline), a professional approach to corporate communications, tried and tested processes for specific crisis scenarios as well as our established Code of Conduct.

The liquidity risk refers to the risk of being unable to meet our financial obligations when they become due. The liquidity risk consists of the refinancing risk, i.e. the necessary cash cannot be obtained or can only be raised at increased costs, and the market liquidity risk, meaning that financial market transactions can only be completed at a poorer price than expected due to a lack of market liquidity. Core elements of the liquidity management of our investments are, in the first place, management of the maturity structure of our investments on the basis of the planned payment profiles arising out of our technical liabilities and, secondly, regular liquidity planning as well as the asset structure of the investments. Above and beyond the foreseeable payments, unexpected and exceptionally large payments may pose a threat to liquidity. In reinsurance business, however, significant events (major losses) are normally paid out after a lead time that can be reliably planned. As part of our liquidity management we have nevertheless defined asset holdings that have proven to be highly liquid even in times of financial stress. In addition, we manage the liquidity of the portfolio by checking on each trading day the liquidity of the instruments contained therein; their underlying parameters are verified on a regular and ad hoc basis. These measures serve to effectively reduce the liquidity risk.

Opportunity report

Speed is one of the qualities used to measure a successful knowledge transfer. Quick solutions and staying one step ahead of the competition is the name of the game. Hannover Re searches systematically for new business opportunities in order to generate sustainable growth and strengthen the company's profitable development. With a view to identifying opportunities and successfully translating ideas into business, Hannover Re adopts a number of closely related approaches in order to achieve holistic opportunity and risk management. Of significance here is the interplay without overlaps of the various functions within opportunity and risk management, which is ensured by defined interfaces.

Key elements in Hannover Re's opportunity management include its various market-specific innovations in the Life & Health and Property & Casualty reinsurance business groups. What is more, innovative and creative ideas are generated by our employees. If they can be successfully translated into additional profitable premium volume, such ideas are financially rewarded. Further elements are the working group on "Emerging Risks and Scientific Affairs" and the "Future Radar" initiative. Not only that, Hannover Re has set up a stand-alone organisational unit for "Opportunity Management". This service unit deals exclusively and systematically with ideas and opportunities and it concentrates its activities on generating additional premium volume with profit potential. To this end, ideas are translated into business opportunities and business models with the backing of project teams, and these are then acted upon in cooperation with primary insurance partners. Such business approaches are subsequently evaluated and fleshed out more concretely by the "Opportunity Management" service unit. This unit also supports selected projects from the conceptual design of holistic business models right through to operational implementation or handover to line responsibility. The goal is to generate new business and thereby sustainably promote Hannover Re's profitable growth. Several initiatives and projects have grown out of some 100 ideas contributed by the global network since the unit was set up. As part of an attractive employee incentive scheme, a number of projects have been financially rewarded – including the opportunity management projects "Weather" and "Energy Savings Protect".

Since as long ago as 2010 the stand-alone service unit "Opportunity Management" has been assigned to the Chief Executive Officer's area of responsibility. This is a clear reflection of the considerable importance that Hannover Re attaches to opportunity management. The monitoring and active networking carried out by the innovative minds involved give rise to close links with other projects, working groups and bodies, such as with the working group on "Emerging Risks und Scientific Affairs" in regard to emerging risks and opportunities

(see page 22 “Other risks”). The working group carries out qualitative assessments of emerging risks. As a result, however, not only are the potential risks analysed but also any available business opportunities. In the year under review, for example, issues such as general environmental pollution, climate change and associated questions of liability, e-cigarettes and the risks of lithium-ion batteries as well as cyber-risks were explored by the working group.

If a business idea is translated into reality and a new reinsurance product results, the normal procedure – provided the criteria defined for this purpose by Risk Management are applicable – is to work through the so-called new product process. This process is supported by Risk Management at Hannover Re. The process is always worked through if a contractual commitment is to be entered into in a form not previously used by Hannover Re or if the exposure substantially exceeds the existing scope of coverage. If this is the case, all material internal and external influencing factors are examined beforehand by Risk Management (e. g. implications for the overall risk profile or the risk strategy) and an assessment is made. Risk Management ensures that before it can be used or sold a new reinsurance product must be approved by the Executive Board.

Overall assessment by the Executive Board

Based on our currently available insights arrived from a holistic analysis of the opportunities and risks, the Executive Board of Hannover Re cannot discern any risks that could jeopardise the continued existence of the Hannover Re Group in the short or medium term or have a material and lasting effect on its assets, financial position or net income. We are convinced that:

- our established system of risk management affords us a transparent overview of the current risk situation at all times
- our overall risk profile is appropriate, and
- our opportunity management plays an important part in Hannover Re’s profitable growth.

As an internationally operating reinsurance group, we move in a highly complex environment. Nevertheless, thanks to our business activities in all lines of reinsurance we are able to achieve optimal risk spreading through geographical and risk-specific diversification while at the same time maintaining a balanced opportunity/risk profile. We consider the risks described in the above sections to be manageable, particularly because our steering and monitoring measures are effectively and closely interlinked. Despite these diverse

mechanisms, individual and especially accumulation risks can decisively affect our assets, financial position and net income. In accordance with our understanding of risk, however, we consider not only risks but also at the same time opportunities. We therefore only enter into those risks that go hand-in-hand with opportunities. Our steering and monitoring tools as well as our organisational and operational structure ensure that we identify risks at an early stage and are able to act on our opportunities. Our central monitoring tool is the system of risk management that we have installed Group-wide, which brings together both qualitative and quantitative information for the purpose of effective risk monitoring. Most notably, the interplay between domestic and foreign risk management functions affords us a holistic and Group-wide overview.

Our own evaluation of the manageability of existing risks is confirmed by various financial indicators and external assessments. Key monitoring indicators, reporting limits and potential escalation steps are defined on a mandatory basis in our central system of limits and thresholds for the material risks of the Hannover Re Group. As a result, the system provides us with a precise overview of potentially undesirable developments in the defined risk tolerances and enables us to react in a timely manner. One testament to our financial stability, for example, is the growth of our shareholders’ equity. Since 2010 we have been able to increase our total policyholders’ surplus (hybrid capital, non-controlling interests and shareholders’ equity) by 150%. In this context, the necessary equity resources are determined by the requirements of our economic capital model, solvency regulations, the assumptions of rating agencies with respect to our target rating and the expectations of our clients and shareholders. This increase gives us a sufficient capital cushion to be able both to absorb risks and act on business opportunities that may arise. Similarly, our very good ratings also testify to our financial stability. The quality of our Enterprise Risk Management (ERM) is evaluated separately by Standard & Poor’s. In the year under review Standard & Poor’s gave our risk management its highest possible grade of “very strong”. Most notably, our established risk culture promotes the development of appropriate risk monitoring systems and strategic risk management. The evaluation encompasses above all the areas of risk culture, risk controls, the management of emerging risks, risk models and strategic risk management. This external appraisal confirms the quality of our holistic approach to risk management. In addition, the risk trigger mechanism and internal monitoring system are reviewed annually by the independent auditor. The Group-wide risk management system is also a regular part of the audits conducted by the internal audit function. For additional information on the opportunities and risks associated with our business please see the Group Annual Report 2014.

Outlook

Forecast

- Solid prospects for 2015
- Rising premium volume expected in total business
- Profitability of life and health reinsurance to show further improvement
- Return on investment of 3.0% targeted for assets under own management
- Group net income forecast to come in around EUR 875 million

Despite the challenging business conditions facing the international (re)insurance industry and the protracted low level of interest rates, it is Hannover Re's expectation that even in this environment it can continue to operate with sustained success. Based on constant exchange rates, we anticipate rising gross premium income for our total business in the current financial year.

In property and casualty reinsurance we expect to book an increased premium volume – adjusted for exchange rate effects – in 2015, although we shall stand by our policy of not making any concessions to our systematic underwriting discipline and we shall continue to reduce our shares in areas where the risks are not adequately priced. With our selective underwriting approach and our concentration on existing business, we safeguard the high quality of our property and casualty reinsurance portfolio. Despite the prevailing intense competition, as a financially robust reinsurer we still see encouraging business potential in a number of segments including North America and Asia-Pacific markets as well as in facultative and structured reinsurance and in the area of agricultural risks. In the first quarter we succeeded in writing several attractive, rather large-volume new treaties, as a consequence of which we now anticipate somewhat stronger growth for the full financial year than had been the case at the end of 2014.

We are also satisfied overall with the outcome of the renewals as at 1 April. Business in Japan is traditionally renewed on this date and treaties also come up for renegotiation – albeit on a lesser scale – in the markets of Australia, New Zealand and Korea.

Although the pressure on rates for natural catastrophe covers in Japan continued to grow as expected, we nevertheless obtained prices that were commensurate with the risks. Price declines in personal accident insurance and in the area of per risk property covers were for the most part very minimal. In

casualty business, on the other hand, rates moved slightly higher. By improving our position with specific core customers we were even able to book modest growth in the total gross premium volume of our Japanese portfolio in the original currency. All in all, we are satisfied with the outcome of the treaty renewals for our Japanese business; we successfully maintained our market position thanks to our good, long-term relationships with our ceding companies.

In Korea, where only a small part of our business was up for renewal, market conditions remain difficult – prompting us to further consolidate our portfolio. The treaty renewals in India proved to be more challenging than anticipated. Prices for traditional property and casualty reinsurance business declined across a broad front despite rising exposures. We responded by scaling back our involvement.

A small portion of US property catastrophe business was also up for renewal as at 1 April. We saw continued premium erosion here of between 5% and 10% as expected, although no further softening in conditions was observed. Our premium volume rose slightly owing to the fact that we wrote more business with our main clients.

Our targeted EBIT margin of at least 10% for our Property & Casualty reinsurance business group remains unchanged. We are aiming for a combined ratio of less than 96%.

In life and health reinsurance we similarly expect our business to fare well in 2015. The positive developments observed towards the close of the year just ended have been sustained, which means that the profitability of the portfolio should show further significant improvement.

The final phase of preparation for the launch of Solvency II got underway in 2015. Our own intensive preparations are now complete, and we consider ourselves well positioned for implementation on 1 January 2016.

In the areas of financial solutions and longevity we expect to see a consistent increase in demand for tailored reinsurance solutions. The ageing population in industrialised nations is ensuring a steady rise in demand for financially oriented reinsurance solutions as protection to cover the longevity risk. In financial solutions business we anticipate stronger demand for reinsurance products designed to provide capital relief which can also help to optimise a primary insurer's solvency and liquidity position and are customised to the client's individual needs. The constantly expanding urban middle class in emerging nations such as China, South Africa and Brazil as well as India and other countries in Southeast Asia is generating brisk demand for products that offer financial security for the family and retirement provision. This is a segment in which we expect to tap into promising business potential.

For our total life and health reinsurance portfolio we are looking to generate organic, currency-adjusted gross premium growth of between 5% and 7% coupled with improved profitability. It remains our expectation that the value of new business for 2015 will be in excess of EUR 180 million. We are targeting EBIT margins of 2% for financial solutions and longevity business and 6% for mortality and morbidity business.

With regard to our IVC targets – which we use to map economic value creation –, we anticipate at least 2% xRoCA for property and casualty reinsurance and at least 3% xRoCA for life and health reinsurance.

The expected positive cash flow that we generate from the technical account and our investments should – subject to stable exchange rates and yield levels – lead to further growth in our asset portfolio. In the area of fixed-income securities our focus remains on the high quality and diversification of our portfolio. We are not currently planning to make any significant changes to the allocation of our investments to individual asset classes. The focus here is primarily on stability while maintaining an adequate risk/return ratio, thereby enabling us to respond flexibly to general developments and opportunities that may present themselves. We are targeting a return on investment of 3.0% for 2015.

Assuming that the burden of major losses does not significantly exceed the expected level of EUR 690 million and that there are no unforeseen downturns on capital markets, Hannover Re continues to anticipate Group net income in the order of EUR 875 million for the 2015 financial year.

Hannover Re envisages a payout ratio in the range of 35% to 40% of its IFRS Group net income for the dividend in the current financial year. This figure could increase in light of capital management considerations if the company's comfortable level of capitalisation remains unchanged.

Events after the reporting date

Matters of special significance arising after the closing date for the quarterly consolidated financial statements are discussed in Section 7.6 of the notes "Events after the end of the quarter" on page 64.

Notes

1. General reporting principles

Hannover Rück SE and its subsidiaries (collectively referred to as the “Hannover Re Group” or “Hannover Re”) are 50.2% (rounded) owned by Talanx AG and included in its consolidated financial statement. Talanx AG is majority-owned by HDI Haftpflichtverband der Deutschen Industrie V.a.G. (HDI). Hannover Re is obliged to prepare a consolidated financial statement and group management report in accordance with § 290 German Commercial Code (HGB). Furthermore, HDI is required by §§ 341 i et seq. German Commercial Code (HGB) to prepare consolidated annual accounts that include the annual financial statements of Hannover Rück SE and its subsidiaries. Hannover Rück SE is a European Company, Societas Europaea (SE), and its registered office is located at Karl-Wiechert-Allee 50, 30625 Hannover, Germany.

The consolidated financial statement of Hannover Re was drawn up in compliance with the International Financial Reporting Standards (IFRS) that are to be used within the European Union. This also applies to all figures provided in this report for previous periods. Since 2002 the standards adopted by the International Accounting Standards Board (IASB) have been referred to as “International Financial Reporting Standards (IFRS)”; the standards dating from earlier years still bear the name “International Accounting Standards (IAS)”. Standards are cited in our notes accordingly; in cases where the notes do not make explicit reference to a particular standard, the term IFRS is used. In view of the fact that reinsurance contracts, in conformity with IFRS 4 “Insurance Contracts”, are recognised according to the pertinent provisions of United

States Generally Accepted Accounting Principles (US GAAP) as applicable on the date of initial application of IFRS 4 on 1 January 2005, we cite individual insurance-specific standards of US GAAP using the designation “Statement of Financial Accounting Standard (SFAS)” that was valid at that time.

As provided for by IAS 34, in our preparation of the consolidated quarterly financial statement, consisting of the consolidated balance sheet, consolidated statement of income, consolidated statement of comprehensive income, consolidated cash flow statement, consolidated statement of changes in shareholders’ equity and selected explanatory notes, we draw on estimates and assumptions to a greater extent than is the case with the annual financial reporting. This can have implications for items in the balance sheet and the statement of income as well as for other financial obligations. Although the estimates are always based on realistic premises, they are of course subject to uncertainties that may be reflected accordingly in the result. Losses from natural disasters and other catastrophic losses impact the result of the reporting period in which they occur. Furthermore, belatedly reported claims for major loss events can also lead to substantial fluctuations in individual quarterly results. Gains and losses on the disposal of investments are accounted for in the quarter in which the investments are sold.

The present consolidated quarterly financial statement was prepared by the Executive Board on 23 April 2015 and released for publication.

2. Accounting principles including major accounting policies

The quarterly accounts of the consolidated companies included in the consolidated financial statement were drawn up as at 31 March 2015.

The consolidated quarterly financial report was compiled in accordance with IAS 34 “Interim Financial Reporting”. Consequently, the accounting policies adopted in the period under review were the same as those applied in the preceding consolidated annual financial statement; changes made in

specific justified cases pursuant to IAS 8 are reported separately in the section entitled “Changes in accounting policies”. For more details of the accounting policies please see the Group annual financial report for the previous year.

All standards adopted by the IASB as at 31 March 2015 with binding effect for the period under review have been observed in the consolidated financial statement.

New accounting standards or accounting standards applied for the first time

In December 2013 the IASB issued “Annual Improvements to IFRSs 2011–2013 Cycle”. The annual improvements involve minor amendments and clarifications relating to the following standards: IFRS 1 “First-time Adoption of International Financial Reporting Standards”, IFRS 3 “Business Combinations”, IFRS 13 “Fair Value Measurement” and IAS 40 “Investment

Property”. The improvements are effective for annual periods beginning on or after 1 July 2014 and were endorsed by the EU in December 2014. Initial application of the revised standards did not give rise to any significant implications for Hannover Re.

Standards or changes in standards that have not yet entered into force or are not yet applicable

In December 2014 the IASB published “Amendments to IFRS 10, IFRS 12 and IAS 28: Investment Entities: Applying the Consolidation Exception”. The amendments address issues that have arisen in the context of applying the consolidation exception for investment entities. They are effective for annual periods beginning on or after 1 January 2016 and have still to be endorsed by the EU.

In December 2014 the IASB also issued “Amendments to IAS 1: Disclosure Initiative”. The amendments provide clarifications in relation to materiality considerations, the aggregation and disaggregation of disclosures and the understandability and comparability of the notes to the IFRS financial statements. They are effective for annual periods beginning on or after 1 January 2016 and have still to be endorsed by the EU.

In September 2014 the IASB published the “Annual Improvements to IFRSs 2012–2014 Cycle”. These annual improvements involve amendments and clarifications relating to the following standards: IFRS 5 “Non-current Assets Held for Sale and Discontinued Operations”, IFRS 7 “Financial Instruments: Disclosures”, IAS 19 “Employee Benefits” and IAS 34 “Interim Financial Reporting”. The amendments are effective for annual periods beginning on or after 1 July 2016 and have still to be endorsed by the EU.

In September 2014 the IASB also published “Amendments to IFRS 10 and IAS 28: Sales or Contributions of Assets between an Investor and its Associate or Joint Venture”. These clarify that the extent of gain or loss recognition for transactions between an investor and its associate or joint venture depends upon whether the assets sold or contributed constitute a business. The amendments are effective for annual periods beginning on or after 1 July 2016 and have still to be endorsed by the EU.

In July 2014 the IASB published the final version of IFRS 9 “Financial Instruments”, which replaces all previous versions of this standard. The standard now contains requirements governing classification and measurement, impairment based on the new expected loss impairment model and general hedge accounting. The originally included model for macro hedge accounting, which considers risk management that assesses risk exposures on a continuous basis and at a portfolio level, is being treated separately from general hedge accounting by the IASB outside of IFRS 9. Initial mandatory application of the standard, which has still to be endorsed by the EU, is tentatively set for annual periods beginning on or after 1 January 2018. Hannover Re is currently reviewing the implications of this standard and anticipates significant implications for the consolidated financial statement.

In May 2014 the IASB issued IFRS 15 “Revenue from Contracts with Customers”. The standard specifies when and in what amount revenue is to be recognised and which disclosures are required for this purpose. IFRS 15 provides a single five-step model to be applied to all contracts with customers. Financial instruments and other contractual rights and obligations which are to be recognised under separate standards as well as (re)insurance contracts within the scope of IFRS 4 are expressly exempted from the standard’s scope of application. The standard is to be applied to an annual reporting period beginning on or after 1 January 2017, but has still to be endorsed by the EU.

In May 2014 the IASB also amended a number of existing standards.

The “Amendments to IAS 16 and IAS 38: Clarification of Acceptable Methods of Depreciation and Amortisation” provide additional guidance on the methods that can be used to calculate depreciation or amortisation of property, plant and equipment and intangible assets. The new guidelines are effective for annual periods beginning on or after 1 January 2016, but have still to be endorsed by the EU.

The “Amendments to IFRS 11: Accounting for Acquisitions of Interests in Joint Operations” clarify the accounting for acquisitions of an interest in a joint operation when the operation constitutes a business as defined in IFRS 11. These amendments are effective for annual periods beginning on or after 1 January 2016, but have still to be endorsed by the EU.

In January 2014 the IASB issued IFRS 14 “Regulatory Deferral Accounts”. The standard permits an entity which is a first-time adopter of IFRS to continue to account, with some limited changes, for “regulatory deferral account balances” in accordance with its previous GAAP, both on initial adoption of IFRS and in subsequent financial statements. Regulatory deferral account balances, and movements in them, are presented separately in the statement of financial position and statement of profit or loss and other comprehensive income, and specific disclosures are required. IFRS 14 applies to an entity’s first annual IFRS financial statements for a period beginning on or after 1 January 2016, but has still to be endorsed by the EU.

In December 2013 the IASB issued “Annual Improvements to IFRSs 2010–2012 Cycle”. The annual improvements involve minor amendments and clarifications relating to the following standards: IFRS 2 “Share-based Payment”, IFRS 3 “Business Combinations”, IFRS 8 “Operating Segments”, IFRS 13 “Fair Value Measurement”, IAS 16 “Property, Plant and Equipment”, IAS 24 “Related Party Disclosures” and IAS 38 “Intangible Assets”. The improvements were endorsed by the EU in December 2014 and are effective for annual periods beginning on or after 1 February 2015 pursuant to Commission Regulation (EU) 2015/28.

In November 2013 the IASB issued “Defined Benefit Plans: Employee Contributions (Amendments to IAS 19)” and thereby clarified the requirements that relate to how contributions from employees or third parties that are linked to service should be attributed to periods of service. The amendments are intended to provide relief in that entities are allowed to deduct contributions from service cost in the period in which the service is rendered. The amendments were endorsed by the EU in December 2014 and are effective for annual periods beginning on or after 1 February 2015 pursuant to Commission Regulation (EU) 2015/29.

Key exchange rates

The individual companies’ statements of income prepared in the national currencies are converted into euro at the average rates of exchange and transferred to the consolidated financial statement. The conversion of foreign currency items

in the balance sheets of the individual companies and the transfer of these items to the consolidated financial statement are effected at the mean rates of exchange on the balance sheet date.

Changes in accounting policies

With effect from the first quarter of 2015 Hannover Re extended its estimation methods to include an additional partial portfolio. This expansion, which relates to estimated amounts within the year from reinsurance treaties not yet brought to account as well as the deferral of such amounts, served to improve the accuracy of our estimations. This represents a change in an accounting estimate, which pursuant to IAS 8 “Accounting Policies, Changes in Accounting Estimates and Errors” was to be performed prospectively in the

period under review without restatement of the comparative figures for previous years. Retention of the parameters and methods used until 31 December 2014 would have reduced the gross premium by EUR 93.4 million, the net premium earned by EUR 32.5 million and the operating result (EBIT) by EUR 2.3 million in the period under review. The effects that this adjustment would have in future reporting periods could only be established with disproportionate effort.

3. Consolidated companies and consolidation principles

Capital consolidation

The capital consolidation is carried out according to the requirements of IFRS 10 “Consolidated Financial Statements” on the basis of a consistent consolidation model for all entities that identifies control as the single basis for verifying the consolidation requirement, irrespective of whether control is substantiated in company law, contractually or economically. Group companies are consolidated from the point in time when Hannover Re gains control over them. Control exists if Hannover Re directly or indirectly has decision-making power over a Group company on the basis of voting rights or other rights, if it has exposure or rights to positive and negative variable returns from its involvement with the Group company and if it can use its power to influence these returns. All of these criteria must be met. Other circumstances may also give rise to control, for example the existence of a principal-agent relationship. In this case a party outside the Group with decision-making powers (agent) acts for Hannover Re, but does not control the company since it merely exercises decision-making powers that have been delegated by Hannover Re (principal). In the context of their operational activities some companies belonging to the Hannover Re Group enter into business relations with structured entities that are also to be examined in accordance with IFRS 10 in conjunction with IFRS 12 with an eye to their implications for consolidation. Structured entities are entities designed in such a way that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. Consolidation decisions are reviewed as necessary and at least once a year. Group companies are consolidated until the Hannover Re Group loses control over them. The accounting policies of Group companies are adjusted, where necessary, in order to ensure consistent application of the Hannover Re Group’s accounting policies. The capital consolidation is based on the acquisition method. In the context of the acquisition method the acquisition costs, measured at the fair value of the consideration rendered by the parent company on the acquisition date, are netted with the proportionate shareholders’ equity of the subsidiary at the time when it is first included in the

Consolidation of business transactions within the Group

Receivables and liabilities between the companies included in the consolidated financial statement are offset against each other. Profits and expenses from business transactions within the Group are also eliminated. Transactions between a disposal group and the continuing operations of the Group are similarly eliminated in accordance with IFRS 10.

consolidated financial statement after the revaluation of all assets and liabilities. After recognition of all acquired intangible assets that in accordance with IFRS 3 “Business Combinations” are to be accounted for separately from goodwill, the difference between the revalued shareholders’ equity of the subsidiary and the purchase price is recognised as goodwill. Under IFRS 3 scheduled amortisation is not taken on goodwill. Instead, impairment is taken where necessary on the basis of annual impairment tests. Immaterial and negative goodwill are recognised in the statement of income in the year of their occurrence. Costs associated with acquisition are expensed.

Companies over which Hannover Re is able to exercise a significant influence are consolidated as associated companies using the equity method of accounting with the proportion of the shareholders’ equity attributable to the Group. A significant influence is presumed to exist if a company belonging to the Hannover Re Group directly or indirectly holds at least 20% – but no more than 50% – of the voting rights. We also derive evidence of significant influence over an associated company from representation on a governing body of such company, participation in its policy-making processes – e.g. with respect to dividends or other distributions –, the existence of material inter-company transactions, the possibility of interchanging managerial personnel or the provision of key technical information for the company. Income from investments in associated companies is recognised separately in the consolidated statement of income.

Non-controlling interests in shareholders’ equity are reported separately within Group shareholders’ equity in accordance with IAS 1 “Presentation of Financial Statements”. The non-controlling interest in profit or loss, which forms part of net income and is shown separately after net income as a “thereof” note, amounted to EUR -1.4 million (EUR 26.5 million) as at 31 March 2015.

For further details we would refer to the relevant information in the Group annual financial report as at 31 December 2014.

Major acquisitions and new formations

The company Hannover Re Global Alternatives GmbH & Co KG was established in March 2015 with its registered office in Hannover, Germany, and has been included in the consolidated financial statement with effect from the first quarter of 2015. Hannover Rück SE and E+S Rückversicherung AG, both limited partners, hold interests of 85% and 15% respectively in the company. The personally liable partner is HAPEP II Komplementär GmbH, also based in Hannover. The business object of the company is to build, hold and manage a portfolio of investments.

The Group company Hannover Re (Ireland) Limited, Dublin, Ireland, established a branch in Canada in February 2015. The Toronto-based branch trades under the name Hannover Re (Ireland) Limited Canadian Life Branch and was registered on 26 February 2015. The business object of the branch is to transact life and health reinsurance business.

Within our subgroup Hannover Reinsurance Group Africa (Pty) Ltd, Johannesburg, South Africa ("HRGSA"), Compass Insurance Company Ltd, also based in Johannesburg, acquired 60% of the shares in Commercial & Industrial Acceptances (Pty) Ltd, Johannesburg ("CIA"), effective 1 January 2015 for a purchase price equivalent to EUR 4.1 million within the scope of a business combination made in stages. Previously, 40%

Other corporate changes

The registered office of the Group company International Insurance Company of Hannover SE, London ("Inter Hannover SE"), was relocated from the United Kingdom to Hannover, Germany. Inter Hannover SE has received approval to commence insurance operations in Germany and was entered in the commercial register in January 2015.

By means of a dividend resolution of 25 March 2015 of ASPECTA Assurance International AG, Vaduz, Liechtenstein, which had hitherto been included in the consolidated financial

statement using the equity method of accounting, a purchase option on the part of the majority shareholder became exercisable. Hannover Re consequently lost its significant influence over the company, as a result of which recognition at equity has ended. The company will be carried under other participations until the shares are returned to the majority shareholder. The purchase option had a fair value of EUR 4.0 million as at the balance sheet date and is recognised under other liabilities.

of the shares in the company, which was included in the subgroup financial statement of HRGSA using the equity method of accounting, were already held by Lireas Holdings (Pty) Ltd, Johannesburg, 51% of which belongs to HRGSA. By means of the acquisition made in stages HRGSA acquired control over CIA, which is now consolidated in the subgroup financial statement of HRGSA. As part of the transaction goodwill equivalent to EUR 3.0 million was capitalised, and in addition the fair value of contingent considerations was recognised. For the purposes of initial consolidation and in accordance with appropriate measurement methods, the fair values of acquired assets and liabilities were to some extent established on the basis of assumptions and estimations based on forecasts of future cash flows. The initial inclusion of the operation in the subgroup financial statement on a provisional basis was therefore carried out using the best available information. IFRS 3 requires that this provisional recognition be finalised within twelve months of the date of acquisition. Resulting changes in the values of carried assets and liabilities are to be recognised in such a way as if their adjusted fair value at the time of initial consolidation had been carried from this date onwards. In the further course of the year under review the provisional carrying amounts of the assets and liabilities acquired in this transaction will be analysed and may in some cases be adjusted.

4. Group segment report

The segment information shown here is based on the same principles as those applied in the consolidated financial statement as at 31 December 2014. It follows the system used for internal reporting purposes, on the basis of which the full Executive Board regularly evaluates the performance of segments and decides on the allocation of resources to them. The “Consolidation” column includes not only the elimination of cross-segment transactions but also, more significantly, companies whose business operations cannot be unambiguously allocated to property and casualty reinsurance or life and health reinsurance. These are principally the service and financing companies belonging to the Group. Since the performance indicators used to steer the segments correspond to the system according to which the consolidated financial statement is prepared, a separate reconciliation of the segment results with the Group result is not provided. We would also refer to the relevant information in the Group annual financial report as at 31 December 2014.

The company Hannover Re Global Alternatives GmbH & Co. KG, which was established in the period under review, is allocable to the property and casualty reinsurance segment; Hannover Re (Ireland) Limited Canadian Life Branch is allocable to the life and health reinsurance segment.

5. Notes on the individual items of the balance sheet

5.1 Investments under own management

Investments are classified and measured in accordance with IAS 39 “Financial Instruments: Recognition and Measurement”. Hannover Re classifies investments according to the following categories: held-to-maturity, loans and receivables, financial assets at fair value through profit or loss and available-for-sale. The allocation and measurement of investments are determined by the investment intent.

The investments under own management also encompass investments in associated companies, real estate and real estate funds (also includes: investment property), other invested assets, short-term investments as well as cash and cash equivalents.

Real estate which is held for sale as defined by IFRS 5 is recognised separately in the consolidated balance sheet.

Intentions to sell are substantiated by individual real estate market conditions and specific property circumstances, taking into consideration current and future opportunity / risk profiles. One property was reclassified to assets held for sale in the period under review. At the time of reclassification the gross book value of the property amounted to EUR 4.8 million (EUR 4.8 million) and the accumulated depreciation totalled EUR 2.2 million (EUR 2.1 million). Measurement of the property at fair value less costs of disposal gave rise to a minimal impairment loss.

For further details we would refer to the relevant information in the Group annual financial report as at 31 December 2014.

The following table shows the regional origin of the investments under own management.

Information on fair values and fair value hierarchy

The methods and models set out below are used to establish the fair value of financial instruments on the assets and liabilities side of the balance sheet. The fair value of a financial instrument corresponds in principle to the amount that Hannover Re would receive or pay if it were to sell or settle the said financial instrument on the balance sheet date. Insofar as market prices are listed on markets for financial instruments,

their bid price is used. In other cases the fair values are established on the basis of the market conditions prevailing on the balance sheet date for financial assets with similar credit rating, duration and return characteristics or using recognised models of mathematical finance. Hannover Re uses a number of different valuation models for this purpose. The details are set out in the following table.

Valuation models

Financial instrument	Parameter	Pricing model
Fixed-income securities		
Unlisted plain vanilla bonds, interest rate swaps	Interest rate curve	Present value method
Unlisted structured bonds	Interest rate curve, volatility surfaces	Hull-White, Black-Karasinski, LIBOR market model etc.
Unlisted ABS/MBS, CDO/CLO	Risk premiums, default rates, prepayment speed and recovery rates	Present value method
Other invested assets		
Unlisted equities and equity investments	Acquisition cost, cash flows, EBIT multiples, as applicable book value	Capitalised earnings method, discounted cash flow method, multiple-based approaches
Private equity funds, private equity real estate funds	Audited net asset values (NAV)	Net asset value method
Unlisted bond, equity and real estate funds	Audited net asset values (NAV)	Net asset value method
Other financial assets – at fair value through profit or loss		
Currency forwards	Interest rate curves, spot and forward rates	Interest parity model
Inflation swaps	Inflation swap rates (Consumer Price Index), historical index fixings, interest rate curve	Present value method with seasonality adjustment
OTC stock options, OTC stock index options	Listing of the underlying share, implicit volatilities, money-market interest rate, dividend yield	Black-Scholes
Insurance derivatives	Fair values, actuarial parameters, interest rate curve	Present value method

Fair value hierarchy

For the purposes of the disclosure requirements pursuant to IFRS 13 “Fair Value Measurement”, it is necessary to assign financial assets and liabilities to a three-level fair value hierarchy.

The fair value hierarchy, which reflects characteristics of the price data and inputs used for measurement purposes, is structured as follows:

- Level 1: Assets or liabilities measured at (unadjusted) prices quoted directly in active and liquid markets.
- Level 2: Assets or liabilities which are measured using observable market data and are not allocable to level 1. Measurement is based, in particular, on prices for comparable assets and liabilities that are traded on active markets, prices on markets that are not considered active as well as inputs derived from such prices or market data.
- Level 3: Assets or liabilities that cannot be measured or can only be partially measured using observable market inputs. The measurement of such instruments draws principally on valuation models and methods.

If input factors from different levels are used to measure a financial instrument, the level of the lowest input factor material to measurement is determinative.

The operational units responsible for coordinating and documenting measurement are organisationally separate from the operational units that enter into investment risks. All relevant valuation processes and valuation methods are documented. Decisions on fundamental valuation issues are taken by a valuation committee that meets monthly.

In the comparable period of the previous year financial assets with a fair value of EUR 26.0 million were no longer allocable to level 1 but rather to level 2 as a consequence of their reduced liquidity. The reclassifications related solely to fixed-income securities held as available for sale. The stated reclassification amounts refer in each case to the book value of the investments recognised at the beginning of the period.

The following table shows the breakdown of financial assets and liabilities recognised at fair value into the three-level fair value hierarchy.

Fair value hierarchy of financial assets and liabilities recognised at fair value

in EUR thousand	31.3.2015			
	Level 1	Level 2	Level 3	Total
Fixed-income securities	30,081	29,208,260	591	29,238,932

Income and expenses from level 3 financial assets and liabilities recognised at fair value

in EUR thousand	1.1. – 31.3.2014			
	Fixed-income securities	Real estate and real estate funds	Other invested assets	Other liabilities
Total in the period under review				
Change in fair value of financial instruments	(283)	–	2,246	4,524
Total depreciation, impairments and appreciation of investments	–	–	(1,170)	–
Thereof attributable to financial instruments included in the portfolio at 31 March of the year under review				
Change in fair value of financial instruments	(283)	–	2,246	4,524
Total depreciation, impairments and appreciation of investments	–	–	(1,170)	–

If models are used to measure financial assets and liabilities included in level 3 under which the adoption of alternative inputs leads to a material change in fair value, IFRS 13 requires disclosure of the effects of these alternative assumptions. Of the financial assets included in level 3 with fair values of altogether EUR 1,746.9 million (EUR 1,580.4 million) as at the balance sheet date, Hannover Re measures financial assets with a volume of EUR 1,625.8 million (EUR 1,474.8 million) using the net asset value method, in respect of which alternative inputs within the meaning of the standard cannot reasonably be established. The remaining financial assets included in

level 3 with a volume of EUR 121.1 million (EUR 105.6 million) relate in very large part to acquired life insurance policies, the valuation of which is based on technical parameters. Derivative financial instruments in connection with the reinsurance business were recognised under the other liabilities included in level 3 in the year under review. Their performance is dependent upon the risk experience of an underlying group of primary insurance contracts with statutory reserving requirements. The application of alternative inputs and assumptions has no material effect on the consolidated financial statement.

5.2 Debt and subordinated capital

Hannover Re recognised altogether four (four) subordinated bonds with an amortised cost of EUR 1,987.9 million (EUR 1,986.5 million) as at the balance sheet date. The subordinated debts from the 2005, 2010 and 2012 financial years in amounts of EUR 500.0 million each were placed on the European capital market through Hannover Finance (Luxembourg) S.A. The fair value of the aforementioned bonds as at 31 March 2015 was EUR 1,777.0 million (31 December 2014:

EUR 1,717.1 million). A further subordinated debt from the 2014 financial year with a volume of EUR 500.0 million, the fair value of which was EUR 544.6 million (31 December 2014: EUR 506.6 million), was issued by Hannover Rück SE and similarly placed on the European capital market. For further information on these bonds please see the previous year's Group annual financial report.

5.3 Shareholders' equity, non-controlling interests and treasury shares

Shareholders' equity is shown as a separate component of the financial statement in accordance with IAS 1 "Presentation of Financial Statements" and subject to IAS 32 "Financial Instruments: Disclosure and Presentation" in conjunction with IAS 39 "Financial Instruments: Recognition and Measurement". The change in shareholders' equity comprises not only the net income deriving from the statement of income but also the changes in the value of asset and liability items not recognised in the statement of income.

The common shares (share capital of Hannover Rück SE) amount to EUR 120,597,134.00. They are divided into 120,597,134 voting and dividend-bearing registered no-par shares. The shares are paid in full. Each share carries an equal voting right and an equal dividend entitlement.

Non-controlling interests in the shareholders' equity of the subsidiaries amounted to EUR 673.8 million (EUR 702.2 million) as at the balance sheet date. They were principally attributable to non-controlling interests in the shareholders' equity of E+S Rückversicherung AG in an amount of EUR 638.4 million (EUR 671.9 million).

Authorised capital of up to EUR 60,299 thousand is available with a time limit of 3 May 2015. The subscription right of shareholders may be excluded with the consent of the Supervisory Board. New, no-par-value registered shares may be issued on one or more occasions for contributions in cash or kind. Of the total amount, up to EUR 1,000 thousand may be used to issue employee shares.

In addition, conditional capital of up to EUR 60,299 thousand is available. It can be used to grant shares to holders of convertible bonds and bonds with warrants as well as to holders of participating bonds with conversion rights and warrants and has a time limit of 2 May 2016.

The Executive Board is authorised – with the consent of the Supervisory Board – to acquire treasury shares of up to 10% of the existing share capital. The authorisation is limited until 3 May 2015.

IAS 1 requires separate disclosure of treasury shares in shareholders' equity. The company was not in possession of treasury shares at any time during the period under review.

The increase in the other reserves arising out of currency translation, which is recognised in equity, was attributable in an amount of EUR 43.3 million (EUR 2.8 million) to the translation of long-term debt or loans with no maturity date extended to Group companies and branches abroad.

6. Notes on the individual items of the statement of income

6.1 Gross written premium

Interest expense on funds withheld and contract deposits	27,166	39,965
Total investment income	415,654	361,151

The impairments totalling EUR 3.1 million (EUR 1.2 million) were attributable largely – in an amount of EUR 2.4 million (EUR 0.0 million) – to the area of fixed-income securities. Impairments of EUR 0.4 million (EUR 1.2 million) were taken in the area of alternative investments. These were attributable exclusively to private equity investments. An impairment loss of EUR 0.3 million (previous year: none) was recognised on investments in real estate. In the reporting period and in the comparable period of the previous year no impairments

were recognised on equities or equity funds because their fair values did not fall significantly – i. e. by at least 20% – or for a prolonged period – i. e. for at least nine months – below acquisition cost. As in the previous year, these write-downs were not opposed by any write-ups on investments that had been written down in previous periods. The portfolio did not contain any overdue, unadjusted assets as at the balance sheet date since overdue securities are written down immediately.

Total	253,625	233,880

7. Other notes

7.1 Derivative financial instruments and financial guarantees

Hannover Re holds derivative financial instruments to hedge interest rate risks from loans connected with the financing of real estate; these gave rise to recognition of other

liabilities in an amount of EUR 4.3 million (31 December 2014: EUR 4.0 million) and other financial assets at fair value through profit or loss of EUR 0.1 million (EUR 0.5 million).

Hannover Re's portfolio contained derivative financial instruments as at the balance sheet date in the form of forward exchange transactions taken out to hedge currency risks. These transactions gave rise to recognition of other liabilities in an amount of EUR 81.8 million (EUR 30.6 million) and other financial assets at fair value through profit or loss in an amount of EUR 57.6 million (EUR 14.5 million).

Hannover Re also holds derivative financial instruments to hedge inflation risks associated with the loss reserves. These transactions resulted in the recognition of other liabilities amounting to EUR 54.9 million (EUR 63.6 million).

In order to hedge the risk of share price changes in connection with the stock appreciation rights granted under the share award plan, Hannover Re took out hedges in the first quarter of 2014 in the form of so-called equity swaps. The fair value of these instruments amounted to EUR 3.5 million (EUR 1.1 million) as at the balance sheet date and was recognised under

Derivative financial instruments in connection with reinsurance

Certain reinsurance treaties meet criteria which require application of the prescriptions in IFRS 4 governing embedded derivatives. These accounting regulations require that derivatives embedded in reinsurance contracts be separated from the underlying insurance contract ("host contract") according to the conditions specified in IFRS 4 and IAS 39 and recognised separately at fair value in accordance with IAS 39. Fluctuations in the fair value of the derivative components are to be recognised in income in subsequent periods.

On this basis Hannover Re reported as financial assets at fair value through profit or loss technical derivatives in an amount of EUR 57.3 million as at 31 March 2015 (31 December 2014: EUR 51.4 million) that were separated from the underlying transaction and measured at fair value.

In addition, liabilities from derivatives in connection with the technical account totalling EUR 160.1 million (31 December 2014: EUR 142.1 million) were recognised under other liabilities as at the balance sheet date.

Of this amount, EUR 156.1 million (31 December 2014: EUR 136.5 million) is attributable to a number of transactions in the Life & Health reinsurance business group that are to be classified as derivative financial instruments. Under these transactions Hannover Re companies offer their contracting parties coverage for risks from possible future payment obligations arising out of hedging instruments. The payment obligations result from contractually defined events and relate to the development of an underlying group of primary insurance contracts with statutory reserving requirements. The contracts are to be classified and recognised as stand-alone credit derivatives pursuant to IAS 39. These instruments gave rise to an improvement in investment income of EUR 3.3 million (31 March 2014: EUR 4.5 million).

other liabilities. The hedge gave rise to a change in equity from hedging instruments recognised directly in equity in an amount of EUR 3.8 million (EUR 0.5 million); ineffective components of the hedge were recognised in a minimal amount under other investment expenses.

By means of a dividend resolution of 25 March 2015 of ASPECTA Assurance International AG, Liechtenstein, which had been included in the consolidated financial statement using the equity method of accounting, a purchase option on the part of the majority shareholder became exercisable. This option had a fair value of EUR 4.0 million as at the balance sheet date and is recognised under other liabilities. The reader is further referred to the explanatory remarks in Section 3 "Consolidated companies and consolidation principles".

The net changes in the fair value of the aforementioned instruments resulted in a charge of EUR 22.7 million to the result of the period under review (31 March 2014: EUR 1.5 million).

Of the derivatives carried on the assets side, fair values of EUR 50.7 million (31 December 2014: EUR 44.8 million) were attributable as at the balance sheet date to derivatives embedded in "modified coinsurance" and "coinsurance funds withheld" (ModCo) reinsurance treaties.

Within the scope of the accounting of ModCo reinsurance treaties, under which securities deposits are held by the ceding companies and payments rendered on the basis of the income from certain securities of the ceding company, the interest-rate risk elements are clearly and closely related to the underlying reinsurance arrangements. Embedded derivatives consequently result solely from the credit risk of the underlying securities portfolio. Hannover Re calculates the fair value of the embedded derivatives in ModCo treaties using the market information available on the valuation date on the basis of a "credit spread" method. Under this method the derivative is valued at zero on the date when the contract commences and its value then fluctuates over time according to changes in the credit spreads of the securities.

The ModCo derivatives gave rise to an improvement in investment income of EUR 0.1 million as at 31 March 2015 (31 March 2014: EUR 1.6 million).

Financial guarantees

Structured transactions were entered into in the Life & Health reinsurance business group in order to finance statutory reserves (so-called Triple-X or AXXX reserves) of US ceding companies. In each case such structures necessitated the involvement of a special purpose entity. The special purpose entities carry extreme mortality risks securitised by the cedants above a contractually defined retention and transfer these risks by way of a fixed/floating swap to a member company of the Hannover Re Group. The total amount of the contractually agreed capacities of the transactions is equivalent to EUR 3,486.1 million (EUR 3,079.4 million); an amount equivalent to EUR 2,149.2 million (EUR 1,887.0 million) had been taken up as at the balance sheet date. The variable payments to the special purpose entities that are guaranteed by the Hannover Re Group cover their payment obligations. Under some of the transactions the payments resulting from the

7.2 Related party disclosures

IAS 24 "Related Party Disclosures" defines related parties as group entities of a common parent, associated entities, legal entities under the influence of key management personnel and the key management personnel of the entity itself. Transactions between Hannover Rück SE and its subsidiaries, which are to be regarded as related parties, were eliminated through consolidation and are therefore not discussed in the notes to the consolidated financial statement. In the year under review the following significant business relations existed with related parties.

Talanx AG holds an unchanged majority interest of altogether 50.22% in Hannover Rück SE. For its part, HDI-Haftpflichtverband der Deutschen Industrie Versicherungsverein auf Gegenseitigkeit, Riethorst 2, 30659 Hannover (HDI) holds a stake of 79.0% in Talanx AG and therefore indirectly holds 39.7% (rounded) of the voting rights in Hannover Rück SE.

The business relationship between Hannover Rück SE and its subsidiary E+S Rückversicherung AG is based on a cooperation agreement. A retrocession by Hannover Rück SE to E+S Rückversicherung AG exists in property and casualty reinsurance. The exclusive responsibilities of E+S Rückversicherung AG for German business and of Hannover Rück SE for international markets have been preserved.

Within the contractually agreed framework Talanx Asset Management GmbH performs investment and asset management services for Hannover Rück SE and some of its subsidiaries. Assets in special funds are managed by Ampega Investment GmbH. Talanx Immobilien Management GmbH performs services for Hannover Re under a number of management contracts.

swaps in the event of a claim are reimbursed by the parent companies of the cedants by way of compensation agreements. In this case the reimbursement claims from the compensation agreements are to be capitalised separately from and up to the amount of the provision.

Under IAS 39 these transactions are to be recognised at fair value as financial guarantees. To this end Hannover Re uses the net method, according to which the present value of the agreed fixed swap premiums is netted with the present value of the guarantee commitment. The fair value on initial recognition therefore amounted to zero. The higher of the fair value and the amount carried as a provision on the liabilities side pursuant to IAS 37 is recognised at the point in time when utilisation is considered probable. This was not the case as at the balance sheet date.

Companies belonging to the Talanx Group granted the Hannover Re Group insurance protection inter alia in the areas of public liability, building, group accident and business travel insurance. Divisions of Talanx AG also performed services for us in the areas of taxes and general administration.

Talanx Reinsurance Broker AG grants Hannover Rück SE and E+S Rückversicherung AG a preferential position as reinsurers of cedants within the Talanx Group. In addition, Hannover Rück SE and E+S Rückversicherung AG are able to participate in the protection covers on the retention of Group cedants and share in the protection afforded by them. In certain circumstances Hannover Rück SE and E+S Rückversicherung AG are obliged to assume unplaced shares of the reinsurance of Group cedants from Talanx Reinsurance Broker AG.

The Hannover Re Group provides reinsurance protection for the HDI Group. To this extent, numerous underwriting business relations exist with related parties in Germany and abroad which are not included in Hannover Re's consolidation. This includes business both assumed and ceded at usual market conditions.

The reinsurance relationships with related parties in the period under review are shown with their total amounts in the following table.

Business assumed and ceded in Germany and abroad

in EUR thousand	1.1.–31.3.2015		1.1.–31.3.2014	
	Premium	Underwriting result	Premium	Underwriting result
Business assumed				
Property and casualty reinsurance	112,583	(64,189)	96,849	61,422
Life and health reinsurance	36,703	6,387	37,930	7,122
	149,286	(57,802)	134,779	68,544
Business ceded				
Property and casualty reinsurance	(2,942)	6,698	(2,347)	540
Life and health reinsurance	(16,040)	(2,253)	(13,734)	(213)
	(18,982)	4,445	(16,081)	327
Total	130,304	(53,357)	118,698	68,871

In the context of a bond issue by Talanx AG the Group companies Hannover Rück SE and E+S Rückversicherung AG invested in a nominal amount of EUR 47.0 million in the issued bearer debt, which has a coupon of 3.125%. The carrying amount of the instrument, which is recognised under fixed-income securities held to maturity, was EUR 47.2 million (EUR 48.3 million) including accrued interest of EUR 0.2 million (EUR 1.3 million).

7.3 Staff

The average number of staff employed at the companies included in the consolidated financial statement of the Hannover Re Group was 2,542 during the period under review (average in 2014: 2,475).

HDI Lebensversicherung AG, Cologne, participated in a nominal amount of EUR 50.0 million in the subordinated bond issued by Hannover Rück SE in September 2014 with a coupon of 3.375%.

As at the balance sheet date altogether 2,550 (2,534) staff were employed by the Hannover Re Group, with 1,297 (1,289) employed in Germany and 1,253 (1,245) working for the consolidated Group companies abroad.

7.4 Earnings per share

Calculation of the earnings per share

	1.1.–31.3.2015	1.1.–31.3.2014
Group net income in EUR thousand	279,711	232,954
Weighted average of issued shares	120,597,134	120,597,134
Basic earnings per share in EUR	2.32	1.93
Diluted earnings per share in EUR	2.32	1.93

The earnings per share is calculated by dividing the net income attributable to the shareholders of Hannover Rück SE by the weighted average number of shares outstanding within the period under review.

Neither in the period under review nor in the previous reporting period were there any dilutive effects.

7.5 Contingent liabilities and commitments

Hannover Rück SE has secured by subordinated guarantee the subordinated debts issued by Hannover Finance (Luxembourg) S.A. in the 2005, 2010 and 2012 financial years in amounts of EUR 500.0 million each.

The guarantees given by Hannover Rück SE for the subordinated debts attach if the issuer fails to render payments due under the bonds. The guarantees cover the relevant bond

There were no other extraordinary components of income which should have been recognised or disclosed separately in the calculation of the earnings per share.

The earnings per share could potentially be diluted in future through the issue of shares or subscription rights from the authorised or conditional capital.

volumes as well as interest due until the repayment dates. Given the fact that interest on the bonds is partly dependent on the capital market rates applicable at the interest payment dates (floating rates), the maximum undiscounted amounts that can be called cannot be estimated with sufficient accuracy. Hannover Rück SE does not have any rights of recourse outside the Group with respect to the guarantee payments.

As security for technical liabilities to our US clients, we have established two trust accounts (master trust and supplemental trust) in the United States. They amounted to EUR 3,641.3 million (EUR 3,173.7 million) and EUR 27.6 million (EUR 24.4 million) respectively as at the balance sheet date. The securities held in the trust accounts are shown as available-for-sale investments. In addition, we furnished further collateral to ceding companies in an amount of EUR 1,109.3 million (EUR 979.1 million) in the form of so-called "single trust funds". This amount includes a sum equivalent to EUR 372.5 million (EUR 329.1 million) which was furnished by investors as security for technical liabilities from ILS transactions.

As part of our business activities we hold collateral available outside the United States in various blocked custody accounts and trust accounts, the total amount of which in relation to the Group's major companies was EUR 2,893.3 million (EUR 2,694.0 million) as at the balance sheet date.

The securities held in the blocked custody accounts and trust accounts are recognised predominantly as available-for-sale investments.

As security for our technical liabilities, various financial institutions have furnished sureties for our company in the form of letters of credit. The total amount as at the balance sheet date was EUR 3,000.7 million (EUR 2,899.1 million).

In addition, we put up own investments with a book value of EUR 116.0 million (EUR 78.9 million) as collateral for existing derivative transactions. We received collateral with a fair value of EUR 42.9 million (EUR 12.9 million) for existing derivative transactions.

7.6 Events after the end of the quarter

In a notification dated 8 April 2015 Hannover Finance (Luxembourg) S.A. announced repayment of the subordinated debt that it had issued in the 2005 financial year on 1 June 2015.

On 1 April 2015 an explosion occurred on the Abkatun oil production platform in the Gulf of Mexico. Hannover Re anticipates a not inconsiderable major loss in the first half-year from this event; based on the information currently available, however, it should be comfortably covered by the unused portion of the major loss budget from the first quarter.

For liabilities in connection with participating interests in real estate companies and real estate transactions the usual collateral under such transactions has been furnished to various banks, the amount of which totalled EUR 613.2 million (EUR 574.3 million) as at the balance sheet date.

Outstanding capital commitments with respect to alternative investments exist on the part of the Group in an amount of EUR 740.8 million (EUR 665.6 million). These primarily involve as yet unfulfilled payment obligations from investment commitments given to private equity funds and venture capital firms.

The application of tax regulations may not have been resolved at the time when tax items are brought to account. The calculation of tax refund claims and tax liabilities is based on what we consider to be the regulations most likely to be applied in each case. The revenue authorities may, however, take a differing view, as a consequence of which additional tax liabilities could arise in the future.

Hannover Rück SE enters into contingent liabilities as part of its normal business operations. A number of reinsurance treaties concluded by Group companies with outside third parties include letters of comfort, guarantees or novation agreements under which Hannover Rück SE guarantees the liabilities of the subsidiary in question or enters into the rights and obligations of the subsidiary under the treaties if particular constellations materialise.

Based on amended tax notices for past assessment periods, Hannover Re anticipates tax refunds in the first half of the year for Hannover Rück SE and E+S Rückversicherung AG that will boost Group net income by an amount in the double-digit millions.
